**Schroeder**

Support commercial TLC based on TAC approach
TAC is fine; should be middle, not the lower 10%
Don't drop from 50 to 25; already limited on net and by TAC
Don't limit commercial fishing licenses to 25
Limit commercial operators to 25; 10% of lower limit needs to reflect actual abundance and be realistic
TLC proposal sounds promising
Quota open until it is filled for TLC
Quota open until it is filled for TLC
Quota open until it is filled for TLC
Quota open until it is filled for TLC
Quota open until it is filled for TLC

If smelt are abundant LAT will be fat and unedible
Get rid of smelt
Don't need smelt in the lake
Fish the smelt
Get rid of smelt
Smelt should be available for people to eat

No LAT size limits; hooking mortality
No LAT size limits; hooking mortality
No LAT size limits; hooking mortality
No LAT size limits; hooking mortality
No LAT size limits; hooking mortality
No LAT size limits; hooking mortality
Continue stocking if you allow commercial fishing; do not implement 1 over 25"; keep bag at 3

Support commercial LAT in all three zones
Increase commercial allocation to 5,000 in MN3
Commercial LAT long overdue
Restrict charter fishing in MN1; don't extend sport season for LAT;
Commercial allocation of LAT in all three zones
Need commercial LAT for tourism in MN2
Allow commercial fishing for LAT in MN3 and MN2 with no smaller mesh than 4.5"

Give larger allocation of LAT to commercial in each zone; don't extend sport season; allocate 5,000 in MN3, 2,500 in MN2, and 500 in MN1
End stocking in MN2; stocking detrimental to native stocks
End stocking in MN2
Allow menomonie fishing nearshore in Dec.
Allow menomonie fishing nearshore in Dec.

Put and take KAM inappropriate; Prefer native species or at least naturally reproducing populations
Cormorants not a threat to the STT; just visible factor for people to blame poor fishing on; cormorants are native unlike STT; cormorants were here before anglers.
Discontinue RBT stocking in Brule River to provide area of natural reproduction; prevent competition with coaster BKT in GP area
Cross KAM and Madison strain so they are easier to catch; cross a bullhead brain into a STT so they wouldn't take as long to catch
Maintain STT genetic integrity
Stock KAM up the shore or allow kill of 1 STT
Allow STT kill in MN3
Phase out nonnative species stocking and restore native species

Support coaster BKT rehabilitation through promoting healthy watersheds
Coasters shouldn't be limited because groundwater hasn't changed in the last 150 years

Please no more exotic (CHS) planting in Lake Superior; native fish please
Discontinue CHS; waste of resources
Discontinue CHS; ineffective and unnecessary
Discontinue CHS
Discontinue CHS
Discontinue CHS
Discontinue CHS
Discontinue CHS
Don't stock CHS; waste of money
Don't stock CHS; waste of money
CHS should not be stocked; they are a mistake
Start netting CHS to reduce numbers
Kill all CHS
Support native species
