

Changes to
Pine and Curry Island
Scientific and Natural Area

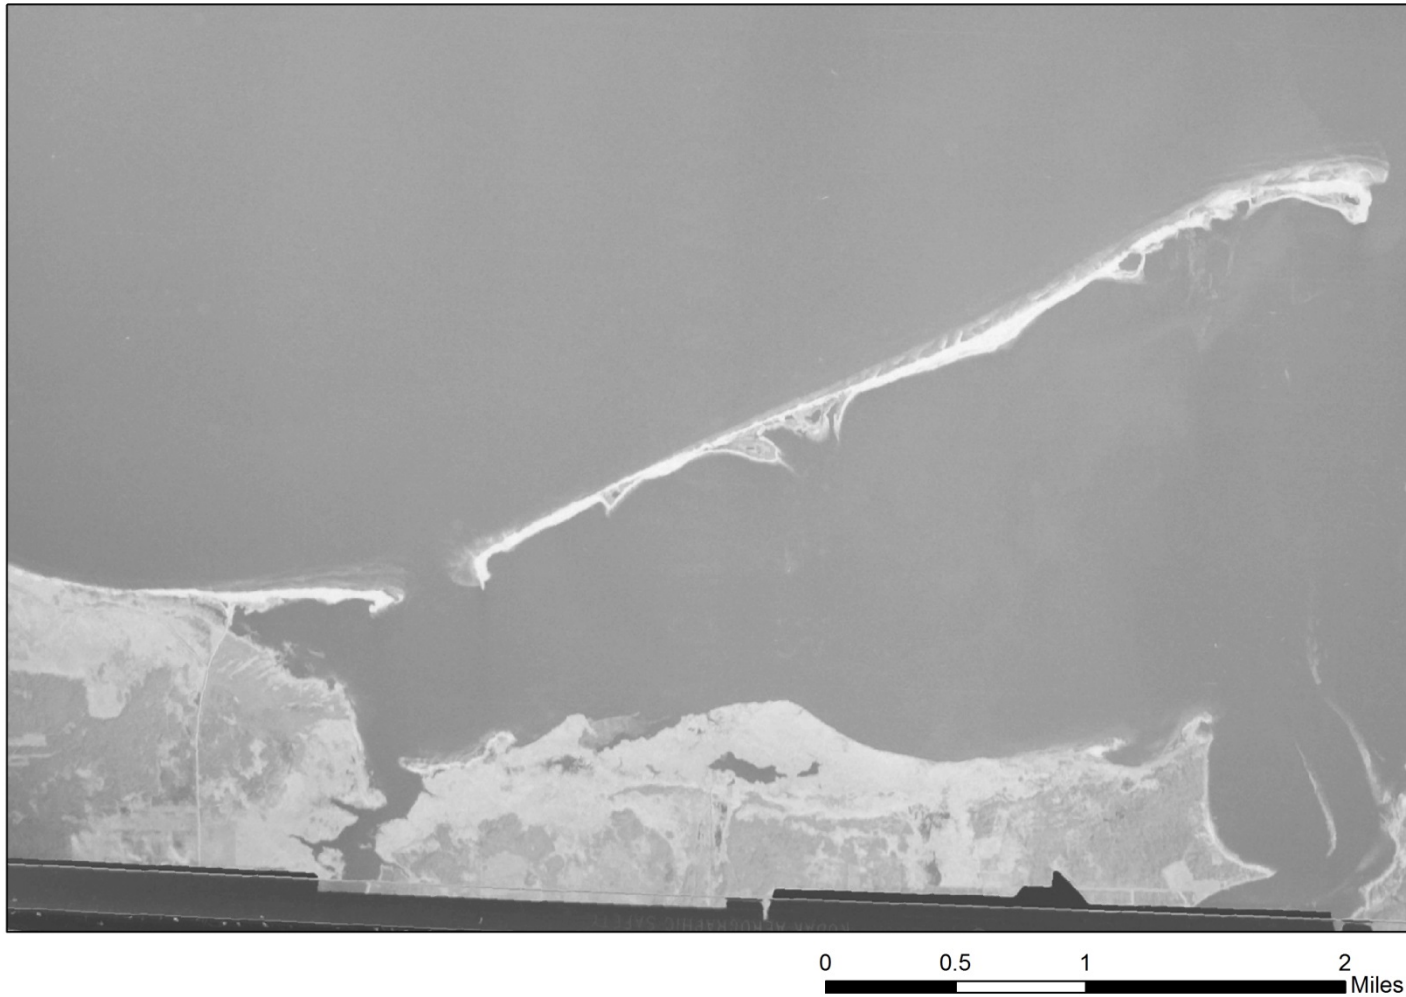

1941-2014

1941

From 1941 to 1985 Pine and Curry Island grows slowly to the southwest, while Morris point grows a peninsula to the southeast.

1953

From 1941 to 1985 Pine and Curry Island grows slowly to the southwest, while Morris point grows a peninsula to the southeast.

1965

From 1941 to 1985 Pine and Curry Island grows slowly to the southwest, while Morris point grows a peninsula to the southeast.

1985

0 0.5 1 2 Miles

From 1941 to 1985 Pine and Curry Island grows slowly to the southwest, while Morris point grows a peninsula to the southeast.

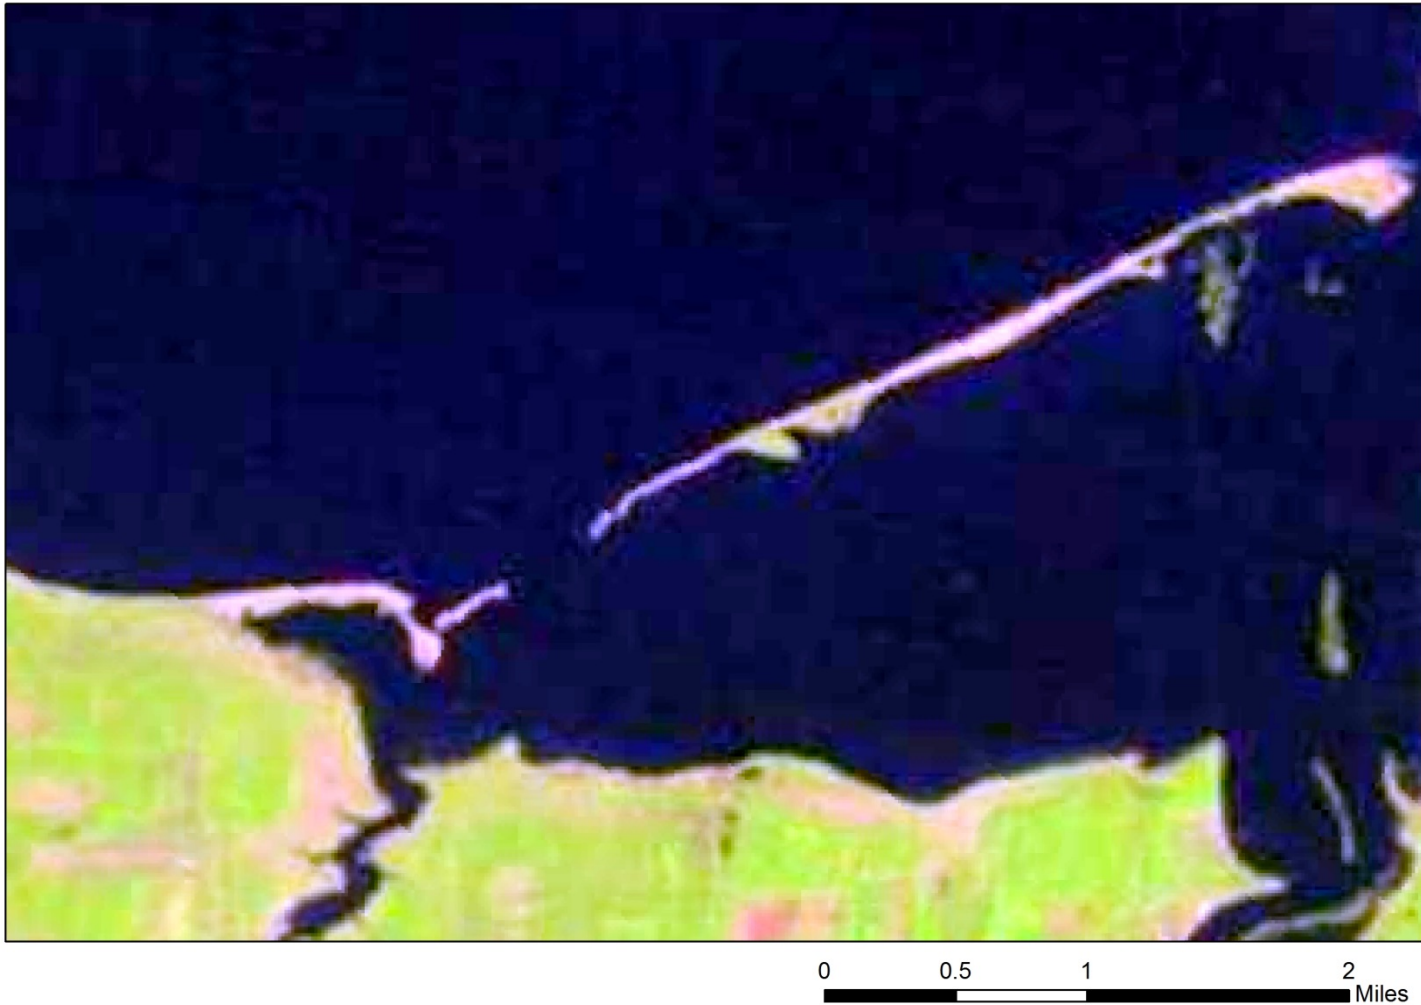

1990

0 0.5 1 2 Miles

Pine and Curry Island is breached in two places in 1985 and 1986. Breach locations remain stable until 1989 when a half-mile wide gap develops, creating a small island (Tern Island) separate from Pine and Curry Island and Morris Point.

1995

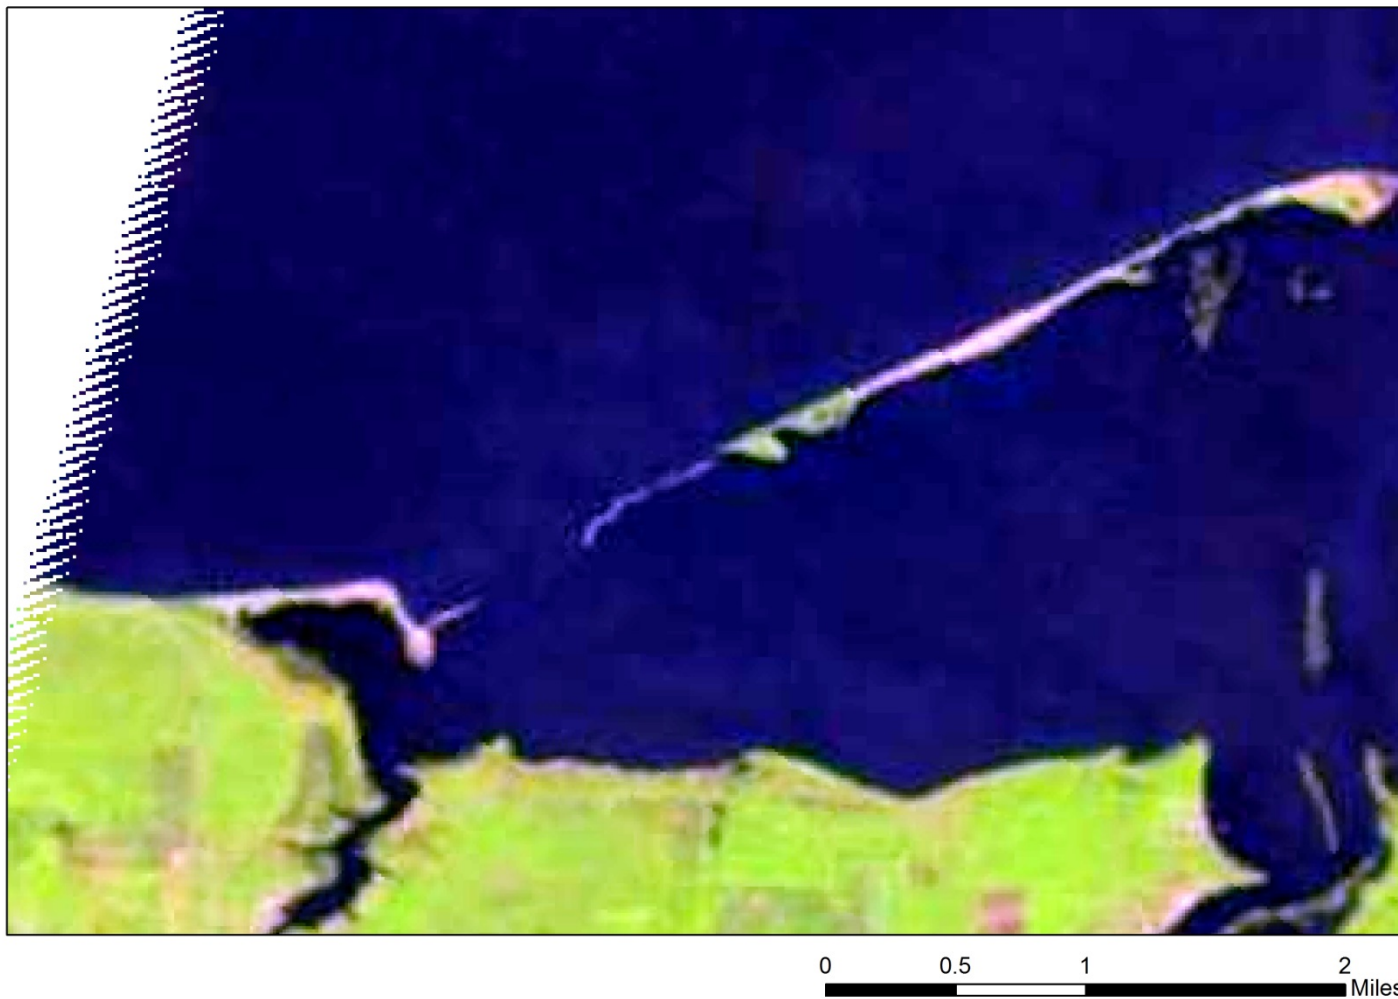

Pine and Curry Island is breached in two places in 1985 and 1986. Breach locations remain stable until 1989 when a half-mile wide gap develops, creating a small island (Tern Island) separate from Pine and Curry Island and Morris Point.

1998

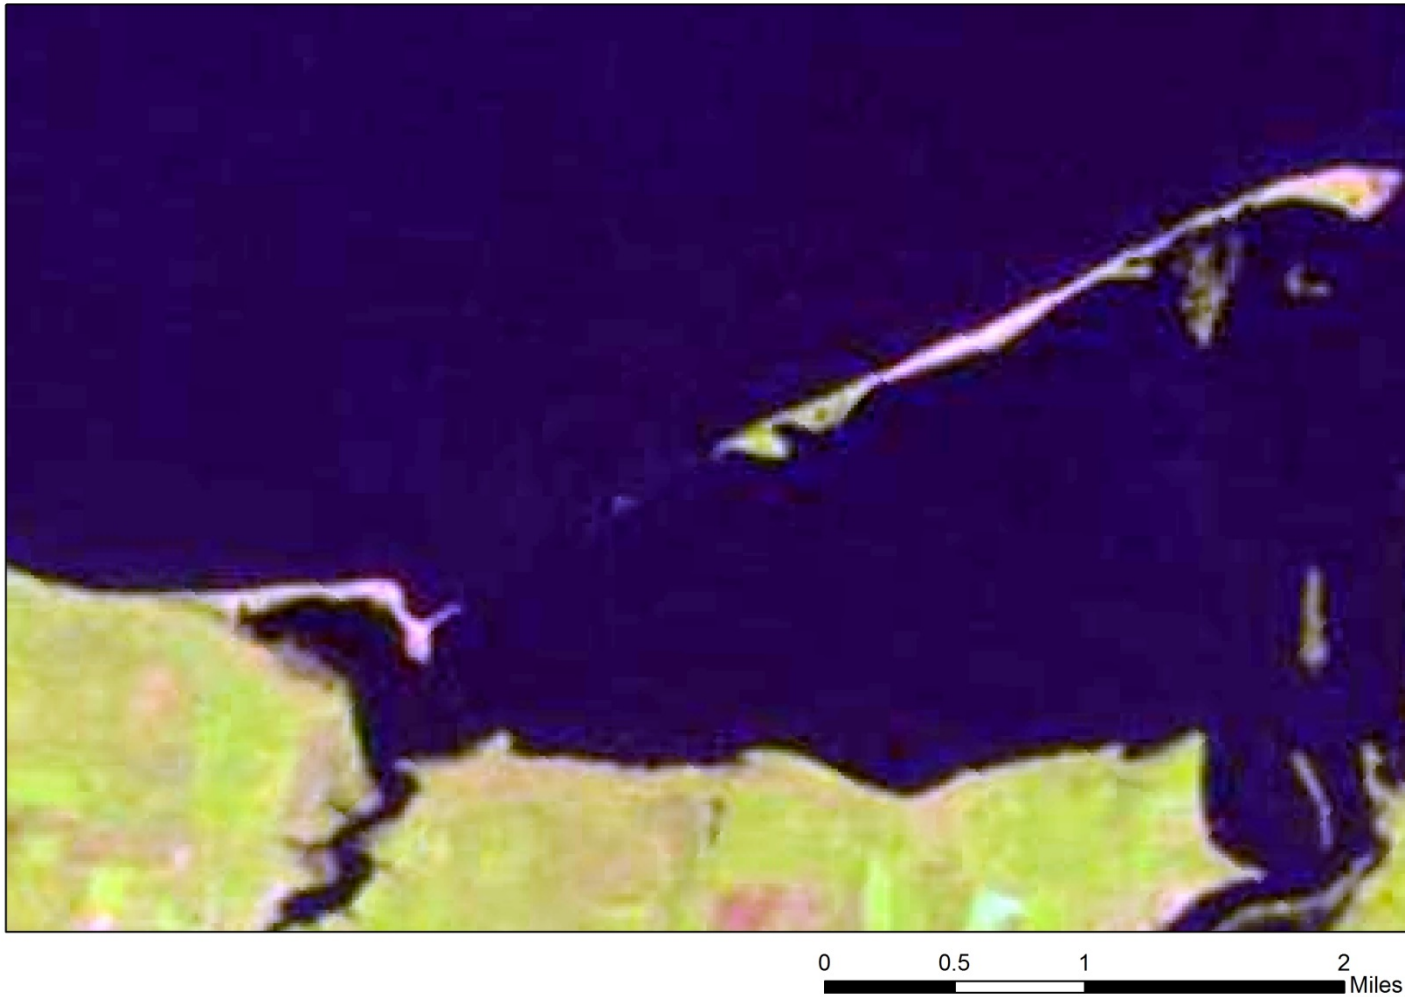

Starting in 1998, Tern Island, off Morris Point and the southwestern most half-mile of Pine and Curry Island erode and almost completely disappear by 2000.

1999

Starting in 1998, Tern Island, off Morris Point and the southwestern most half-mile of Pine and Curry Island erode and almost completely disappear by 2000.

2000

Starting in 1998, Tern Island, off Morris Point and the southwestern most half-mile of Pine and Curry Island erode and almost completely disappear by 2000.

2010

From 2000 to 2010, a small spur off of Morris Point erodes, while Pine and Curry Island remains relatively stable.

2013

Pine and Curry Island Scientific and Natural Area in 2013.
