

Soudan Underground Mine Surface Audio Tour

Chapter 1

0:59

Welcome to the Soudan Underground Mine State Park Audio Surface Tour. The main attraction at the mine is the underground historic tour, but if not for the surface facilities; the ore would never have been removed from the underground. The audio surface tour will introduce you to the inner workings of the surface facilities and help tell the “rest of the story.”

The Soudan Audio Surface Tour brochure has a map of the tour route. Each of the stops has a separate audio chapter, so you will need to select the next audio file when you arrive at the location. If you have any questions while on the tour, feel free to ask a park employee in the visitor center, which is also known as the Dry House. There will be some walking over uneven terrain, so watch your step.

The surface audio tour combined with the underground historic tour will give you a full understanding of the mining operation. Enjoy learning about the mine and helping honor the many men that helped make this facility possible.
