Birding Opportunities at McCarthy Beach State Park

The wooded acreage of McCarthy Beach State Park provides excellent habitat for a wide range of song species. Over 20 species of warblers are present during spring and fall migration and the breeding season. The trails along County Road 501 give easy access to the park's woodlands for easy birding. The hermit thrush is common here. Red crossbill and evening grosbeak are often seen in the Beatrice Lake area. Sturgeon Lake is a good place for gulls, including ring-billed and herring and Bonaparte and Caspian tern. Common loon frequent the lake. Great gray owl are occasionally seen in the park in winter.

Season and Abundance Key

The **seasons** in the checklist are defined as follows:

Sp (Spring) = March, April, May

Su (Summer) = June, July

Fa (Fall) = August, September, October, November

Wi (Winter) = December, January, February

Abundance codes are defined as follows:

C = Common — present, relatively easy to find

U = Uncommon — observed, may be difficult to find

O = Occasional — may or may not be present in any year

R = Rare — has occurred at least once, may or may not be expected to recur

The names and taxonomic arrangement of species follows that of the Checklist of the Birds of Minnesota (January, 2001), prepared by the Minnesota Ornithological Records Committee.

This checklist contains the names of all birds that have been documented in the park by reliable observers. It was constructed by Robert B. Janssen, Jerry Bonkoski, and the MN DNR-Division of Parks & Recreation using observations of the above, park staff and other observers, as well as Minnesota Ornithologist's Union records and data contained in research reports. If you are interested in the specific sources used for a particular park, contact the Parks Division Resource Management Program Coordinator by telephone at 651-259-5594 or by mail at MN DNR-Parks, 500 Lafayette Road, Box 39, St. Paul, MN 55155-4039.
