

McCarthy Beach Site Information

The Side Lake Campground has narrow roads with sharp turns so may not be suitable for some large RVs and long trailers. See additional information at end of page. * ADA campsite

Practical Length is the length listed on the reservation website due to site limitations such as a sharp turning radius. Depending on how they handle, **some units shorter than this length still may not fit** and some longer ones might; use caution when booking.

Notes:

- *Some drivers of large RV's and long trailers find it difficult to maneuver in the Side Lake Campground due to narrow roads and sharp turns. The road leading to sites 46 - 59 is especially narrow and curvy.*
- *Class A motorhomes and long trailers may not make the turns in the second and third loops (sites 18 - 59) depending on how the individual unit handles. Investigate further before renting site / driving in.*
- *Width is the narrowest spot on the campsite spur. Some widen back out enough for slideouts.*
- *Sites 1 - 18 have 30 amp electric service. Sites 19 - 21 have 50 amp electric service. No water/sewer.*
- *Water spigots throughout campground. Look for "w" symbol on campground map.*
- *ADA campsites have hardened spurs and use areas, ADA tables & ADA fire rings.*
- *Tent pad size indicates general area available for tents. No actual tent pad structures.*
- *Campsite size (S, M, L) is relative to other sites in the campground.*
- *Privacy is relative to other sites in the campground. Most sites have some shrubs/trees between them.*
- *Most sites have a mix of sun and shade. Unusually sunny or shady sites are noted.*
