Notes

* Taxa are listed at the species level, with the exception of the unisexual ambystomatid which is a complex of polyploids that reproduce through kleptogenesis. Other hybrids and subspecific taxa that were first documented in Minnesota by MBS are purposely not included on this list.

† A new genus to MN.

‡ tentative identification-this group needs revision.

§ first US record, previously documented in Canada.

** Collected in 2017 & 2018 but identified in 2024.

†† A newly described (2011) species.

‡‡ Collected in 2016, but identified in 2024.

§§ A newly described (2014) species.
