Women in Mining

Birdseed Mining

Social Studies/Math/Science (Adaptable for K-12)

PURPOSE: Mining is a complex process in which relatively small amounts of valuable or useful minerals or metals (ores) are extracted from very large masses of rock. This activity will illustrate how this “needle in a haystack” process works.

OBJECTIVE: Students will be able to experience “hands-on” the difficulty that miners face in locating valuable mineral deposits. They will also learn a simple lesson in economics--a less valuable commodity may be more profitable because it is more abundant. Students will be shown the importance of clean, environmentally conscious mining, and will learn that all mining operations must be performed and pay for reclamation work.

ITEMS NEEDED:

Wild Bird Food - any commercial birdseed mix with sunflower seeds and at least 2 other seed varieties.

Shallow pans (inexpensive plastic paint pans work well).

Small beads (approximately 2mm) blue, gold and silver.

Medium beads (approximately 4-6mm) white color.

INSTRUCTIONS:

1. Divide students into groups of 4 to 6.

2. Pour approximately 1 pound of birdseed in each pan.

3. Add 2 gold beads, 4 silver beads and 8 blue beads, and 3 white beads to each pan - mix into birdseed.

4. The beads and seeds represent the following:

   Gold beads = Gold
   Silver beads = Silver
   Blue beads = Copper
   Sunflower seeds = Iron
   All other seeds = Waste

   White beads = Reclamation (These beads will be assigned a COST rather than a VALUE because reclamation must be done at all mining operations regardless of how much profit was made. See #7.)

5. Students search through the seed mixture and separate out or “mine” beads, sunflower seeds and other grain products, making piles of each. Allow 5 to 10 minutes for the mining activity. (NOTE: The instructor should hint to the students that they should mine
NEATLY, not mixing waste seeds with their beads, sunflower seeds and not scattering seeds all over the area. Instructor can have the option of examining the work of each group, or assigning a helper to monitor each group to see how cleanly the “mining” is being done. Instructor or helper may assign an arbitrary “fine” to cover costs for “environmental damage” at the messy tables.

6. Assign a value for each type of bead or seed.

Example follows:
Gold bead = Gold = $5.00 each
Silver bead = Silver = $4.00 each
Blue bead = Copper = $3.00 each
Sunflower seeds = Iron = $2.00 each
All other seeds = Waste = $0.00
White beads = Reclamation = $100.00 each

7. Have the students count up the number of gold, silver, and blue beads, sunflower seeds from their piles and multiply the number of each by their values given in #6. Document all information on the “Birdseed Mining Spreadsheet”. Students should also note the amount of any environmental damage fines on the spreadsheet. Students should count the number of white beads in their pile and multiply by the reclamation factor. This number should be recorded on the reclamation cost line on the spreadsheet.

8. Have each group total up the dollar value of their “mining” operation, subtracting the environmental damage fines and reclamation costs. Have each group share their success with the others. Prizes may be awarded to the best table of “miners”.

Birdseed Spreadsheet - K-3

Gold bead = GOLD:
Number of beads ________ x ________ = ________ price value

Silver bead = SILVER:
Number of beads ________ x ________ = ________ price value

Blue beads = COPPER:
Number of beads ________ x ________ = ________ price value

Sunflower seeds = IRON:
Number of Sunflower seeds ________ x ________ = ________ price value

TOTAL Value of all Products = _______________________

SUBTRACT cost of Environmental Damage fines = _______________________

SUBTOTAL = _______________________

---

Birdseed Spreadsheet - Grades 4-12

GOLD BEAD: Each gold bead = 10 oz. of gold (or 100 oz of gold).

Number of beads ________ x 10 oz. = ________ x ________ = ________

price value

SILVER BEAD: Each silver bead = 10 oz. of silver (or 100 oz. of silver).

Number of beads ________ x 10 oz. = ________ x ________ = ________

price value

BLUE BEAD: Each blue bead = 100 lbs. of cooper (or 2,000 lbs of copper - 1 ton).

Number of beads ________ x 100 lbs. = ________ x ________ = ________

price value

SUNFLOWER SEEDS: Each Sunflower seed = 100 lbs. of iron (or 2,00 lbs of iron - 1 ton).

Number of Sunflower seeds ________ x 100 lbs. = ________ x ________ = ________

price value

TOTAL Product Value = _______________________

SUBTRACT cost of Environmental Damage fines = _______________________

SUBTOTAL = _______________________

Number of WHITE beads ________ x $100.00 = _______________________

SUBTRACT reclamation cost from SUBTOTAL = _______________________

GRAND TOTAL = _______________________
