A guide to boating on the Mississippi, St. Croix and Minnesota rivers.

Minnesota Department of Natural Resources

2012
While not an approved boating safety course, this publication is recognized by the National Association of State Boating Law Administrators to benefit boating safety - 2012.

Information in this publication was updated in 2012. Front cover photo taken by © Lawrence C. Duke.
Unsinkable Molly Brown.

Children under 10 years old are now required to wear a life jacket while boating in Minnesota.

*It’s smart, it’s safe, it’s the law.

*Except when boat is anchored and being used as a swimming platform or the child is below decks or in an enclosure or cabin on the craft.

ABOUT THIS GUIDE

The Minnesota Department of Natural Resources has prepared two publications in response to the recommendations of the GREAT I Study and the demand of the boating public for a detailed guide of Minnesota’s great rivers. This is one of two river guides that covers the most popular portions of the Mississippi, St. Croix and Minnesota rivers (see inset on back cover).

These guides are intended to assist boaters on the rivers and to promote safe and enjoyable use of the resource. They contain detailed maps of the rivers and include frequently requested information on boating facilities, safety aspects and hazards specific to the Mississippi, St. Croix and Minnesota rivers.

Take a few minutes to read through the safety information section in the next few pages. The BOATING ON THE BIG RIVER section on page 6 is especially important to boaters on the Mississippi River. Be informed about submerged wing dams and stump fields. IT COULD SAVE YOUR MOTOR’S LOWER UNIT! Also know the proper boating procedures around towboats as well as locks and dams. IT COULD SAVE YOUR LIFE!

NOTE:

★ A river, by its character, is constantly changing its physical dimensions. The rivers portrayed in this guide are no exception. While the mapping for this guide utilized the latest information, changes may have occurred. It is suggested that the user exercise care when navigating, especially in the backwater areas where changes occur more frequently.

★ The information provided on marinas and other facilities is done as a public service for boaters. This is not an endorsement by the State of Minnesota or the Minnesota Department of Natural Resources of the private facilities or services listed in this publication. Facilities are also subject to change.

Using This Guide

Using this river guide is easy. An index of maps and a fold-out legend is located on the back cover. An explanation of each facility is located on the facing or previous page for each map. Facilities are indexed by river mile and side of river (left or right when going downstream). Note: State parks as well as many county and regional parks require entrance fees for motor vehicles.
BOATING SAFETY

YOU ARE THE KEY TO WATER SAFETY

Considering the large number of participants in Minnesota, water-based recreation is a relatively safe pastime. Still, an average of 20 persons die in boating accidents each year in the state. In addition, many more people are injured and hundreds of thousands of dollars worth of property damage results from boating mishaps.

Your water fun depends on you, your equipment and other people who, like yourself, enjoy spending leisure time on, in or near the river.

Let’s look at your responsibilities:

1. A knowledge of rules and regulations for watercraft use.
2. A knowledge of safety equipment required by law to be on board your watercraft.
3. A knowledge of the operation of your boat.
4. Knowledge of boating hazards unique to large rivers.
5. Responsibility for the actions of all persons on board the watercraft.
6. Acceptance of the fact that everyone has the right - and privilege - to use the river in a proper manner.

FLOAT PLAN

Leave a float plan with someone who will miss you if you do not return on time. A float plan should include the following information: (See sample float plan on pages 109-110.)

1. A description of your car and where you will park it.
2. Where you intend to boat.
3. A description of your boat including the registration number.
4. Communication equipment on board and cell phone number or radio call sign if you have one.
5. The names of all persons on board.
6. Safety equipment on board.
7. Estimated time of arrival back home.
8. The latest return time home.

9. Your alternate plans in the event of an emergency or bad weather.

10. The phone number of the county sheriff for the area in which you will be boating.

11. Don’t forget to cancel your float plan when you return home.

BOATING ACCIDENTS

Many boating accidents can be avoided if you follow these safe boating practices:

1. Wear your life jacket.
2. Avoid alcohol when boating.
3. Be especially careful around cold water. Hypothermia kills.
4. Turn your navigation lights on at sunset.
5. Carry a fire extinguisher aboard at all times.
6. Be aware of changing weather conditions.
7. Keep a constant lookout for other boats and navigational hazards.

Remember:

★ Most boating accidents occur during the day and in clear weather.

★ The majority of boat operators involved in accidents have considerable experience in using their craft, but have never taken a formal boating safety course.

Reporting Accidents

Federal and state rules require that any accident, collision, or other casualty involving a motorboat or other vessel, must be reported if it resulted in:

1. a fatality, or

2. personal injury involving loss of consciousness, requiring medical treatment, or resulting in incapacitation for 24 hours or more, or

3. property damage of $2,000 or more.

In Minnesota, all accidents must be reported to the county sheriff’s office where the accident occurred. The telephone numbers for each county sheriff’s office are on pages 105-106 of this publication. In an emergency - call “911.”
BOATING ON THE BIG RIVER

LOCKS AND DAMS

In the 1930s, the United States Army Corps of Engineers built a series of locks and dams on the Mississippi River to maintain a navigational channel of at least nine feet in depth. Eleven such lock and dam facilities are located on the Mississippi north of the Minnesota-Iowa border. These locks and dams present a special hazard to recreational boaters who are unfamiliar with them. Special precautions must be taken when approaching and going through these navigational structures. In addition to these facilities, there are other dams on the Mississippi, Minnesota and St. Croix rivers that have no locks.

High speed operation can cause accidents. A single occupant was ejected into the water when he hit a wake while operating his boat at high speed near the Twin Cities. The boat continued “unmanned” towards shore where it hit a swimming raft. The raft launched the boat skyward and it came down on top of a boat lift, causing heavy damage to the boat, lift and dock. Amazingly enough, there were no injuries and alcohol was not involved.
**What is a lock?**

The dams on the Mississippi River create a series of navigational pools. Each dam can be thought of as a step in the river as it descends to the Gulf of Mexico. A lock is used to raise or lower boats to the next pool in the system. A lock is a chamber that may be opened on either end to allow boats to enter or leave. Once a boat is in the lock, water is added to the chamber to raise a boat to the upstream pool or released from the chamber to lower a boat to the downstream pool.

**Deceptive Currents**

Near each lock and dam the water is turbulent and dangerous. Currents are strong, swift, and deceptive. As water is drawn in and discharged from a lock chamber or drawn over a dam, hydraulic currents are created that are powerful enough to drag a boat and its occupants to the bottom.

**Restricted Areas**

There are certain restricted areas to protect boaters in the vicinity of locks and dams. The water near each lock and dam has dangerous currents. Boats may not enter the following areas:

- The area 600 feet upstream and 150 feet downstream from the dam (including auxiliary locks not in service).

Additional restrictions may be posted at each dam or spillway. Obey all signs and buoys.
Locking Through

Upon approaching a lock, a set of traffic signals (the same as you would find at a road intersection) will inform the boater as to the lock’s status. See below for a description of these lights and their meaning. Upon approach to the lock, you can contact the lockmaster via channel 14 on your VHF marine radio or simply pull the signal cord on the lock approach wall. You should be aware that the lock may be in use as you approach, locking craft through from the other side, and you may have to wait.

**No Light**

Lock not in use, approach guide wall and signal for lockage by pulling signal cord.

**Red Light**

Stand clear, do not approach.

**Yellow Light**

Approach lock under full control.

**Green Light**

Enter lock.

Upon receiving a green light, proceed slowly into lock and observe mooring lines spaced along lock wall. The lines should be held by hand and not tied to the boat while in the lock chamber. Do not tie a line to a recessed ladder. Insure that passengers remain seated at all times and keep hands inside the boat to avoid the chance of crushed fingers. A life jacket should be worn by any occupants on the open deck of the craft. Do not leave the engine running during lockage, nor climb ladders of the lock structure.

Upon completion of the lock filling or emptying operation and when the gates are fully open, a signal will be given by the lock operator that it is safe to depart the lock. The signal will be either a P.A. announcement, one short toot of the signal horn or a hand signal by the lock operator. Leave the lock at a slow speed assuring
that you are well clear of the lock structure before gaining speed. The approaches to the locks are considered no wake areas.

Recreational craft and towboats are locked through on a first-come, first-served basis. Only government craft and regularly scheduled passenger craft have priority. Boaters should be aware that delays in locking through may occur. Lock and dam personnel monitor channels 14 and 16 on the VHF marine radio and can be contacted about waiting periods. There is no charge for locking through.

HAZARDS

Towboats

When encountering a towboat, always obey the following rules:

1. Stay clear of towboats! They usually have the right-of-way over recreational boats and they create strong wakes.

2. Never anchor in their course; it may require a half-mile or more for them to stop.

3. Remember, at night their lights appear far apart compared to small boats.

4. They have a blind area directly in front of the barges and on each side.

5. Stay clear of the stern of the towboats. They may suddenly turn on a burst of power and overturn a small boat.

6. Turn your bow into the wake of barges and boats.

7. When meeting a barge at a bend in the river move to the inside of the bend where possible.

Wing Dams

To help improve the navigability of the Mississippi River by controlling the direction of channel flow, the U.S. Army Corps of Engineers has placed hundreds of wing dams.

A wing dam is an elongated pile of rocks or concrete which is usually submerged. Because wing dams often lie just below the water surface, they cannot be visually detected, are not marked
and pose a great danger to the unwary boater. If you follow these boating practices, however, you can avoid an unwanted encounter with a wing dam.

1. Stay within the main channel, indicated by buoys and markers (see fold-out flap on back cover). It is continually dredged and maintained.

2. If approaching shore, proceed slowly from a perpendicular angle.

3. Stay clear of ripples in the water surface; these are a tell-tale sign of a wing dam lying just below.

**WARNING!**

The dam symbols in this guide show approximate locations of the wing or closing dams. The actual locations may vary.

**Wing Dams Are Not Buoyed!**

![Diagram of river and dam with warning signs]

**Stump Fields**

When the dam system on the Mississippi River was built in the 1930s, many low-lying areas were covered with trees. Although the trees were cut down, many submerged tree stumps still remain. We have shown the approximate locations of stump fields on the river maps; but please remember, whenever you are in a backwater area there is always a chance that you will encounter a stump. Use extra caution in these areas.
Changing Water Levels

Water levels change frequently on the rivers, causing changes in currents that may not be immediately obvious to boaters. High water can produce unpredictable and swift currents and moving debris that may come in the form of logs, timbers, docks and whole trees. Conversely, low water can produce hazards above and below the water’s surface (stump fields, wing dams, etc.).

BUOYS AND MARKERS

A list of the buoys and markers you will encounter on the river can be found on the fold-out flap of the back cover. A knowledge of them is essential for safe navigation on the river. Not all structures including wing dams are marked by the buoys.

All boaters are cautioned not to rely solely on buoys for navigation because of their potential unreliability. U.S. Coast Guard buoys are removed, relocated or established whenever the U.S. Coast Guard determines a change is desirable for the safety of navigation.

While the U.S. Coast Guard makes every reasonable effort to ensure buoys are properly located to serve their intended purpose, they cannot keep all buoys and navigable channels under constant surveillance. Between visits of a Coast Guard buoy tender, it is possible for a channel or obstruction to have shifted, the water depth to have changed, or for a buoy to have moved, sunk, or gone adrift.

Daymarks are square, triangular or diamond-shaped boards (usually red or green in color) that are used to mark channels on the large river systems. On the Mississippi they will also indicate the river mileage upstream from Cairo, Illinois on a white board beneath the daymark. They may also be lighted (green or white lights on green boards and red or white lights on red boards). Even with lighted buoys and markers, boating at night should be avoided if at all possible.

VHF-FM MARINE RADIO

Channel 16 is a calling and distress channel. Communications on channel 16 should be kept short, limited to initial contact only, unless there is an emergency.

Channel 22A is for non-emergency communications with the U.S. Coast Guard. It is also used by the U.S. Coast Guard to make broadcast notices to mariners.

Locks on the Upper Mississippi River monitor channels 14 & 16. Initial contact with locks should be made on channel 14, which will also be the working channel in most cases.
When important marine events occur, broadcast notices to mariners are issued. These notices are broadcast by U.S. Coast Guard radio stations on channel 22A (157.1 MHz). Non-scheduled broadcasts are often made to supplement scheduled broadcasts. U.S. Coast Guard preliminary announcements of broadcasts are made on channel 16 (156.8 MHz) and channel 19 (156.450 MHz) as a secondary channel. The U.S. Coast Guard broadcasts are then given on channel 22A (157.1 MHz). Broadcast times for this area are 3:00 a.m., 8:00 a.m., 3:00 p.m. and 9:00 p.m.

For more information on marine radio use, contact the Federal Communications Commission (website and telephone number are at the end of this guide).

**DRAWBRIDGE OPERATION REGULATIONS**

For drawbridges over the Mississippi and St. Croix rivers, the usual sound signal for opening the draw is a prolonged blast (4 to 6 seconds duration) of a whistle or horn, followed by one short blast (one second duration), sounded not more than three seconds after the prolonged blast. This sequence is repeated at intervals until acknowledged by the drawtender. If the draw can be opened immediately, acknowledging signal is one prolonged blast followed by one short blast, sounded not more than 30 seconds after opening signal. If the draw cannot be opened immediately, or if open and must be closed immediately, five short blasts, sounded in rapid succession not more than 30 seconds after the opening signal, shall be repeated at intervals until acknowledged by a signal which has the same meaning from the vessel. Some drawbridges are equipped with VHF marine radios; a list is provided below and on the next page. Mariners approaching these drawbridges are urged to contact the bridge tender to confirm requests for opening, or to exchange information. Bridges may also have opening schedules to reduce the backup of traffic. These schedules can vary with the hour, day and time of year and are usually posted on the bridge itself. You should factor this possibility into your float plan.

**REGULATIONS AND EQUIPMENT**

*(This is not a complete summary of regulations. Rules and laws are subject to change. A current copy of federal, Minnesota and Wisconsin regulations should be consulted. Unless noted, all rules summarized below are from Minnesota and were in effect in 2012.)*

**REGISTRATION (LICENSING)**

All watercraft, except wild-rice boats and duckboats used during the appropriate season, non-motorized boats nine* feet or less in length, and seaplanes, are required to be licensed by the DNR. This rule does not apply if the watercraft is licensed by another state, federal agency or foreign country. All canoes, sailboats, kayaks and rowing shells used in Minnesota must be registered either in Minnesota or the user’s home state.

To obtain or renew a watercraft license, go to the nearest deputy registrar’s office (where you license your car) or the DNR’s License Center (address is at the back of this guide).

*10 feet or less as of 1/1/13

**SAFETY EQUIPMENT**

**Personal Flotation Devices - PFD**

The U.S. Coast Guard estimates that 80 percent of the boating fatalities in the country could have been prevented if boaters were wearing their life jackets. This is especially important in boats less than 20 feet in length. The most common boating fatalities are capsizing and falling overboard. Minnesota rules require that:

- On all boats, *a U.S. Coast Guard (USCG) approved wearable device (Type I, II, III or V) must be worn or readily accessible for each person on board as well as any persons being towed on water skis or similar devices. Anyone operating or riding on a personal watercraft (Jet Ski, Sea Doo etc.) must WEAR a Type I, II, III or V USCG approved device (see page 16-18).*

*The following are exempt from state PFD carriage laws: 1) All sailboards, and 2) rowing team members specified in law and accompanied by a chase boat carrying the required PFDs. The requirement for a chase boat does not apply on waters where it is preempted by federal regulations. These waters include the Mississippi, St. Croix and Minnesota Rivers.*
In addition, on all boats 16 feet or more in length, except canoes and kayaks, at least one U.S. Coast Guard (USCG) approved Type IV throwable device must be immediately available aboard the craft. Type IV devices include buoyant cushions, ring buoys and horseshoe buoys.

All flotation devices must be U.S. Coast Guard (USCG) approved and bear the USCG approval number. The devices must be in serviceable condition and, if wearable, must be of the correct size for the person who is or would be using it.

As of 2005, Minnesota law requires that children less than 10 years of age wear a PFD when aboard a boat that is underway, unless they are below decks or in an enclosed cabin. There are also exemptions for commercial vessels and also any boat at anchor when swimming or diving activities are taking place.

Lights

All watercraft must be equipped with the navigation lights required by law when operating between sunset and sunrise. These lights are to warn others and in many cases indicate what the watercraft is doing.

Boaters should check the state or federal regulations for the lighting requirements for their craft.

Fire Extinguishers

All watercraft using motors should carry a U.S. Coast Guard approved fire extinguisher. Both state and federal laws require fire extinguishers on watercraft carrying or using fuel or other flammable fluid in any enclosure of the boat. Check the state or federal regulations for specific requirements.

Signaling Systems

A whistle or horn is required on all motorboats 16 feet or longer. Check the current regulations for exact requirements.

Other Desirable Equipment

- Anchor and line
- Fenders
- Flashlight
- First aid kit
- Marine radio
- Cell phone
- Paddle, oars or auxiliary outboard
- Bilge pump or bailing devices
- A tool kit and spare parts (including an extra propeller)
- Battery box or non-conductive cover for terminals (required by State of Wisconsin).
RULES OF THE ROAD

There are traffic rules afloat, as well as on our highways. Common sense tells us we should know what to do when passing, meeting and/or crossing the path of another craft. These rules are simple and they provide uniform patterns of passing and direction that otherwise would not exist.

**Port to Port or Head to Head**

Each watercraft must pass on the port or left side of the other when meeting port to port or head to head.

**Starboard to Starboard**

When courses of two boats are so far on the starboard or right of each other as not to be considered a head to head meeting, they may pass on the starboard side of each other.

**Crossing**

When two boats approach each other at right angles, the boat on the starboard *(right)* side has the right-of-way. The stand-on boat must hold course and speed while the give-way boat must keep clear and pass behind the boat with the right-of-way.

**Overtaking**

In an overtaking situation, the boat being overtaken has the right-of-way and must hold course and speed, even if the overtaking boat is a sailboat.

**Non-Motorized Boats**

Except when passing, sailboats and non-motorized craft have the right-of-way over motorized watercraft. Steer clear of them, and remember that your wake can cause them trouble.

**Commercial Vessels**

Small boats should not insist on the right-of-way when approaching large commercial vessels, which are limited in maneuverability.

**Emergency Craft and Move Over Law**

- All watercraft will yield right-of-way to an authorized watercraft displaying a red or blue flashing light.
- When approaching and passing a law enforcement watercraft with its emergency lights activated, the operator of a watercraft must safely move the watercraft away from the law enforcement watercraft and maintain a slow-no wake speed while within 150 feet of the law enforcement watercraft.

**At Night**

At night, running lights indicate which boat has the right-of-way. The green light is on the starboard *(right)* side and a red light on the...
port (left) side of the craft. If the red and white lights are the only ones visible, then that boat is stand-on and has the right-of-way.

**Whistle Signals**

1 **BLAST** - passing on the port (left) side.
2 **2 BLASTS** - passing on the starboard (right) side.
3 **3 BLASTS** - operating in reverse.
5 **BLASTS** - DANGER - may be used to indicate passage is not safe.

**WATERCRAFT OPERATOR’S PERMIT**

See the chart on page 17 to determine Minnesota’s age and permit requirements. Permits may be obtained by contacting the Minnesota Department of Natural Resources Boat and Water Safety Section at:

**MN DNR Boat & Water Safety**
500 Lafayette Road
St. Paul, MN 55155-4046
Boat & Water Safety (651) 259-5400
DNR Information: (651) 296-6157 or in Minnesota Toll Free: 1-888-646-6367
www.mndnr.gov/boatingsafety

Wisconsin also has permit and age requirements for motorboat operators, including some adults. More information on Wisconsin’s boating education requirements can be obtained from the Wisconsin DNR (address located on page 23 of this guide).

**PERSONAL WATERCRAFT**

What is a personal watercraft? Sometimes known as Jet Skis, Wave Runners, PWCs, etc., a personal watercraft is defined by law as a motorboat that is: 1) powered by an inboard motor powering a water jet pump or by an outboard or propeller-driven motor; and 2) designed to be operated by a person or persons sitting, standing, or kneeling on the craft, rather than in the conventional manner of sitting or standing inside a motorboat.

All personal watercraft are considered motorboats and therefore, any regulations that govern other motorboats (such as fishing boats, cabin cruisers, etc.), also govern personal watercraft.

**Personal Watercraft Laws**

In summary, the law requires that:

- Anyone operating or riding on a personal watercraft must wear a U.S. Coast Guard approved Type I, II, III or V personal flotation device (PFD or life jacket).
- Operation of personal watercraft is allowed only from 9:30 a.m. to 1 hour before sunset.
★ A personal watercraft rules decal issued by DNR needs to be on the craft in full view of the operator.
★ Personal watercraft must travel at slow - no wake speed (5mph or less) within 150 feet of non-motorized boats, shore (unless launching or landing skiers directly to or from open water), docks, swim rafts, swimmers, or any moored or anchored boat.
★ If you tow a person on water skis, or any other device, there must be an additional person on board the personal watercraft to act as an observer. (The observer does not have to be facing backward.) The skier/kneeboarder etc. must also be wearing a PFD or there must be one on board the personal watercraft (continued on next page)

</tbody>
</table>

* this is only a summary of the legislation and not a copy of the actual law
** for purposes of the BWI law, both the youthful operator and the supervising adult are considered to be in actual physical control of the motorboat
watercraft for the skier. Factory-installed or factory-specified rearview mirrors are allowed instead of an observer when pulling a skier or other device (tube, kneeboard, etc.). The mirrors must be specified by the personal watercraft manufacturer. After-market mirrors, stick-on mirrors, motorcycle mirrors etc., do not qualify for the observer exemption.

★ If the machine is equipped by the manufacturer with a lanyard-type engine cutoff switch, it must be attached to the person, life jacket or clothing of the operator when underway.

★ You may not operate a personal watercraft if any part of the spring-loaded throttle system has been removed or tampered with so it interferes with the return-to-idle system.

★ You may not chase or harass wildlife.

★ You may not travel through emergent or floating vegetation at greater than slow-no wake speed.

★ You may not operate a personal watercraft in a manner that unreasonably or unnecessarily endangers life, limb or property.

★ You may not weave through congested watercraft traffic, or jump the wake of another watercraft within 150 feet of the other watercraft. This includes other personal watercraft.

★ You may not operate a personal watercraft while facing backward.

ENFORCEMENT

Whenever you are boating or fishing on the rivers in this book you are subject to laws and rules similar to those in effect on streets and highways. Enforcement of state regulations is the responsibility of Minnesota conservation officers, Wisconsin DNR conservation wardens, and county sheriffs’ deputies. You are also subject to federal laws which are enforced by the U.S. Coast Guard, National Park Service and the U.S. Fish and Wildlife Service.

ALCOHOL & DWI

Alcohol will influence your balance, coordination, vision, judgment and reaction time. The use of alcohol is involved in about a third of all the boating deaths that occur in Minnesota and Wisconsin. This includes not only the spectacular collisions, but the lone angler who drowns after falling out of their boat on a peaceful backwater.

Operating a motorboat while under the influence of alcohol, a controlled substance or other illegal chemical is unlawful. Operators who are impaired may be required to take tests by an enforcement officer to determine their sobriety.

Penalties for DWI or refusal to submit to a chemical test on a motorboat can include any or all of the following:
★ a fine
★ a jail sentence
★ loss of your motorboat operating privileges
★ loss of your driver’s license
★ loss of your car or truck license plates
★ forfeiture of your motorboat and boat trailer

WAKE DAMAGE AND EROSION

Watercraft operators are responsible for damage to property, shoreline and moored boats caused by their wake. Wake damage is more likely during periods of high water with normal operation. A combination of factors should be considered when assessing the possibility of damage caused by your wake including speed, draft and nearness to the bank. Operating out of the normal navigation channel also increases the likelihood of wake damage.

Research

Research done on the river by the Minnesota Department of Natural Resources (DNR) near Red Wing from 1989 through 1992 revealed that high energy wakes from motorboats can greatly accelerate natural erosion, causing the banks to erode by as much as two feet per year on the inside of a riverbend and up to 14 feet on the outside of the riverbend over a three-year period! This erosion was most common during periods when the river was at least three feet above the normal low water level. The study used locations and techniques to reflect the specific effects attributable to recreational boat wakes, realizing that the river is also subject to commercial barge traffic, as well as the natural action of waves and currents. As an example, a parallel channel in the same area of the river, which receives very little recreational boat traffic, did not show the same accelerated bank erosion. More information on this area can be found in the “Mississippi River Guide.”

This erosion has the potential for serious consequences for river ecology, fishing and boating resulting in a loss of shoreland, increased sediment in the water and a loss of trees and vegetation along the river.

The Effects

1. **Reduced Recreation** - Sediment washed into the river clouds the water, creating poor swimming, fishing and boating conditions.
2. **Damage to Fish and Wildlife Habitat** - Sediment settles out of the water and fills in important backwater areas choking out aquatic vegetation that is essential to fish and wildlife.
3. **Additional Dredging** - Over time, this extra sediment will probably require additional dredging to maintain the navigation channel. This costs additional taxpayer dollars and presents the problem of where to safely place the extra dredge spoil.
4. **Property Loss** - When land is lost, it cannot easily be replaced.
Owners of riverbank property, whether private or public, are deprived of its use. In addition, the expenditure of thousands of dollars may be necessary by the owners in an attempt to stabilize the shoreline.

5. **Damage to Boats** - Trees and large branches can float downstream after falling into the water (creating *snags* or *dead heads*), sometimes lodging in the bottom of the river. These become serious hazards to watercraft. Many of them also float just below the surface of the river, hidden like a mine from the unsuspecting boater and serious damage can result from hitting one of them. At best you will be left with a repair bill for hull repairs, a new propeller or a lower drive unit (which can cost up to $3,000 to repair or replace). At worst, your boat could hit a deadhead at night and capsize, resulting in injury or death.

6. **Damage to Facilities** - When floating snags hit an obstruction (such as a bridge, navigational buoy, dock or lock and dam) they can cause damage. In addition, removal of the floating trees and repair to buoys and facilities costs money, which comes from you as a taxpayer.

**The Solution**

As a boater, you are the key to reducing shoreline erosion when you are on the river by reducing the speed and resulting wake from your boat, especially when the water level is above normal. To reduce your wake, you first need to understand that most modern power boats operate in three different speed zones:

- **Displacement Speed** - This is the slowest speed for most motorboats and occurs when the boat operates with the bow down at slow speeds resulting in very little wake.

- **Transition Speed** - When power is applied, the bow rises and the engine is using the maximum amount of fuel as it attempts to get the boat up on *plane* (if the boat has a planing hull). It also creates the largest wake, since the boat is now plowing through the water.

- **Planing Speed** - When a boat reaches planing speed the bow drops, fuel consumption is less than transition speed and only a small portion of the hull contacts the water (*which creates less of a wake than transition speed*). Note: many cruisers and houseboats cannot reach this speed.

**The Future**

If all boaters become aware of the wakes their boats create and take action to reduce them when necessary, shoreline erosion can be reduced and conditions should improve. If this does not occur voluntarily, however, mandatory speed and wake restrictions may have to be placed on the river.
POLLUTION

Trash Disposal

Many people receive cuts and other injuries from trash thrown in our rivers and on shorelines. This same trash can injure wildlife through cuts, entanglements, strangulation, suffocation and digestive disorders. Throwing trash in the water is against the law. A fine, jail sentence, or other penalty can be imposed on anyone who is convicted of this offense. Remember, “If you carried it in, carry it back!”

Marine Toilets

Both federal and state laws prohibit the discharge of raw sewage from boats. Minnesota law requires that sewage from marine toilets be retained through the use of a U.S. Coast Guard Certified Type III holding tank which is pumped out at dockside, or a portable device which retains waste on board for disposal on shore (there is one exception noted below). Pumpout locations are listed with the information on marinas in this publication. U.S. Environmental Protection Agency regulations (which preempt state law) allow the use of U.S. Coast Guard Certified Type I or Type II treatment/discharge devices only on the Mississippi River below Lock and Dam No. 2 (Hastings).

AQUATIC INVASIVE SPECIES (AIS) & DRAIN PLUG LAWS

See the DNR website (www.mndnr.gov/AIS) for more information:

- **Clean** visible aquatic plants, zebra mussels and other prohibited species from watercraft, trailers, and equipment before transporting from any water access.
- **Drain** water from bilge, livewell, motor, ballast tanks, and portable bait containers before leaving water accesses or shoreline property.
- **Keep** drain plug out and water-draining devices open while trailering or transporting watercraft.
- **Dispose** of unwanted bait, including minnows, leeches and worms, in the trash. It is illegal to release live bait into a waterbody and to release worms on the ground.
- **Additional recommended precautions, not required by law** … Spraying with high-pressure water, rinsing with very hot water, and/or drying boats and water-related equipment for at least five days is advised to remove or kill hard-to-see aquatic invasive species before moving to other water bodies.
FINAL NOTE

This discussion of rules and regulations is by no means complete. Reference should be made to the current state, federal and local regulations before you embark on your first cruise. The Minnesota Boating Guide is a summary of laws and rules and is available from the Minnesota DNR or a Minnesota county sheriff. Wisconsin regulations can be obtained from the Wisconsin DNR (see page 23 for addresses.)

AGENCIES AND ORGANIZATIONS

MINNESOTA DEPARTMENT OF NATURAL RESOURCES

Minnesota’s lakes and rivers offer a wealth of canoeing, boating and fishing opportunities.

Public Access/State Water Trails

The DNR State Water Trials Program provides printed maps for 32 rivers and the North Shore of Lake Superior. The free maps show access points, campsites, rest areas and portages. Hazards such as dams, waterfalls and rapids are marked. A description of each water trail lets paddlers know what to expect along the way. The DNR also provides online digital mapping, and a real-time river level reporting service at www.mndnr.gov/watertrails. Paddlers and boaters can call the DNR Information Center to order printed maps or check the condition of water trails at (651) 296-6157 or toll free in Minnesota 1-888-646-6367, TDD: (651) 296-5484 or toll free in Minnesota 1-800-657-3929.

Minnesota DNR accesses are usually open 24 hours a day. No fee is charged for their use, nor is there a fee for any of the accesses shown on the county access maps. Note: State parks as well as many county and regional parks require entrance fees for motor vehicles and may not be open 24 hours a day. Remote water trail campsites are typically free and non-reservable, unless otherwise noted on the maps.

For public access and water trail maps and brochures contact:

DNR Information Center
500 Lafayette Road
St. Paul, MN 55155-4040
(651) 296-6157
or in MN toll free
1-888-646-6367
DNR web site: www.mndnr.gov

Adopt-a-River Program
This program encourages Minnesota volunteers to “adopt” a section of a lake, river, wetland or ravine to ensure its long-term health by doing at least one annual trash cleanup.

DNR Parks and Trails  
500 Lafayette Road  
St. Paul, MN 55155-4052  
(651) 296-6157  
DNR web site: www.mndnr.gov/adoptriver

**Boat and Water Safety Program**

One of the boat and water safety program’s primary responsibilities is education. Using brochures, boating courses, pamphlets, billboards, television and radio public service announcements, media interviews and news releases, the public is kept informed of boating safety issues.

DNR Boat and Water Safety Unit  
500 Lafayette Road  
St. Paul, MN 55155-4046  
(651) 259-5400  
DNR web site: www.mndnr.gov/boatingsafety

**Division of Enforcement**

The Division’s responsibilities on the river include enforcement of fish and wildlife regulations, boating safety laws, water-use regulations and water pollution laws. DNR conservation officers also conduct firearm, snowmobile and all-terrain vehicle (ATV) safety training programs; enforce snowmobile and ATV laws; and patrol state parks and campgrounds.

DNR Division of Enforcement  
500 Lafayette Road  
St. Paul, MN 55155-4047  
(651) 259-5222  
DNR web site: www.mndnr.gov/enforcement

**WISCONSIN DEPARTMENT OF NATURAL RESOURCES**

The Wisconsin DNR is also involved with enforcement, boating safety, pollution control, boat licensing, and information and education. For more information about Wisconsin DNR programs contact:

Wisconsin DNR  
West Central Region  
1300 West Clairemont Avenue  
Box 4001  
Eau Claire, WI 54702  
(715) 839-3700  
DNR web site: http://dnr.wi.gov
VIOLATIONS

Report law violations by calling 911. Report fish and wildlife violations by calling Minnesota or Wisconsin Department of Natural Resources conservation officers at:

**Minnesota** 1-800-652-9093    **Wisconsin** 1-800-TIP-WDNR
*(Turn in Poachers)*

NATIONAL PARK SERVICE

The National Park Service (NPS), U.S. Department of the Interior, manages a wide range of areas throughout the United States to conserve natural, cultural and recreational resources while providing for their enjoyment today in such a manner that leaves them unimpaired for future generations. The NPS manages two units of the National Park System in and near the Minneapolis/St. Paul metropolitan area, the upper 27 miles of the Lower St. Croix National Scenic Riverway (NSR) and the Mississippi National River and Recreation Area along the Mississippi River.

The Lower St. Croix NSR was added to the National Wild and Scenic Rivers System in 1972. The Riverway covers river and lake-like environments, along with a narrow shoreline corridor, for 52 miles (84 kilometers) from the St. Croix Falls dam to Prescott, Wisconsin, where the river joins the Mississippi. It is jointly managed by the National Park Service, the MN Department of Natural Resources, and the WI Department of Natural Resources to protect and enhance the lower St. Croix River’s scenic beauty and outstanding recreational opportunities. In the section of river covered by this guide, the NPS has direct management responsibility of the Riverway from the north city limits of Stillwater, MN to the hydroelectric dam at Taylors Falls/St. Croix Falls.

The Mississippi National River and Recreation Area was designated by Congress in 1988. It covers the Mississippi River and adjoining shore areas from the mouth of the Crow River at Dayton to the Goodhue County line southeast of Hastings. The National Park Service provides interpretive and information programs about the Mississippi and cooperates with local and state agencies in managing the river’s scenic and recreational characteristics.

**Lower St. Croix**
St. Croix National Scenic Riverway
Headquarters Visitor Center

U.S. FISH AND WILDLIFE SERVICE, MINNESOTA VALLEY NATIONAL WILDLIFE REFUGE

The Minnesota Valley National Wildlife Refuge is administered by the U.S. Fish and Wildlife Service, and is one of only a few urban wildlife refuges in the nation, where wild coyotes, bald eagles, badgers and beavers live.

Located along the Minnesota River in the heart of the Twin Cities metro area, Minnesota Valley National Wildlife Refuge offers a variety of free outdoor recreational experiences for individuals and families. The Refuge also has two Education & Visitor Centers, gateways to over 18,000 authorized acres of forest, prairie, and wetlands. The main Center is located in Bloomington, one mile east of the Mall of America. A second Center is located south of Carver. The Refuge stretches nearly 90 river miles from Fort Snelling State Park beyond Belle Plain, Minnesota.

General Information
Minnesota Valley National Wildlife Refuge and Wetland Management District
3815 American Blvd. East
Bloomington, MN 55425
Phone / TTY (952) 854-5900
fax (612) 725-3279

www.fws.gov

U.S. Fish & Wildlife Service Regulatory Signs

Closed areas are established in some portions of the refuge to protect nesting and migratory wildlife and sensitive habitat. Areas marked with an Area Beyond This Sign Closed sign are closed to all public entry.
U.S. COAST GUARD

The Coast Guard, the nation’s lead agency in boating safety, has three primary roles on the rivers: 1) to ensure waterway safety & safe river commerce, including the inspection of ports and commercial vessels for safety, 2) the maintenance of aids to navigation, and 3) the protection of the environment, including pollution prevention, and the response to oil spills or other marine incidents. All portions of the Minnesota, Mississippi and St. Croix Rivers fall into the Eighth U.S. Coast Guard District - Sector Upper Mississippi River (this sector includes all of the Twin Cities Metro Area and the Mississippi River to Cairo, IL):

U.S. Coast Guard Sector Upper Mississippi River
1222 Spruce Street
St. Louis, MO 63103
Non-emergency (314) 269-2500
24 hour emergency 1-866-360-3386
or contact using marine channel 16 - 24 hrs-a-day.
www.uscg.mil/d8/sectumr

U.S. COAST GUARD AUXILIARY

The U.S. Coast Guard Auxiliary offers public courses in boating safety and seamanship. They are taught by experienced Auxiliary members and the only charge is for course materials. These courses are usually given in the winter and spring.

www.cgaux.org

U.S. POWER SQUADRONS

U.S. Power Squadrons is a private, non-profit organization dedicating themselves to boating and boating safety. The Power Squadrons offer free public boating courses.

www.usps.org

HELP ON THE RIVER

EMERGENCY AND NON-EMERGENCY

Emergency (illness, injury, accident, etc.) dial 911 on your cell phone or send a distress call on Channel 16 of your marine radio. Remember to give your position and the nature of the emergency and be prepared to stay on the line or have someone stand by the radio.
Non-Emergency (out of fuel, engine failure, etc.) first try to summon help from a passing boat or call one of the marinas in this publication for assistance. Law enforcement craft may not be available to respond in non-emergency situations. If an officer or deputy is able to assist, they may only be able to tow you to the closest safe mooring or marina where you can call for or obtain mechanical assistance.

NOTE: Since 1999, the use of personal watercraft (Jet Skis, Wave Runners, etc.) has been prohibited by the National Park Service north of the MN DNR Boomsite Access - at appx. River Mile 24.8.
NOTE: Due to the possible spread of zebra mussels into the upper reaches of the St. Croix, the National Park Service has restricted most boat traffic originating downstream from passing the checkpoint near the Arcola High Bridge (Canadian National Railroad) - mile 28.6. Boaters may wish to check the National Park Service’s St. Croix website www.nps.gov/sacn for more up-to-date information.

Slow speed zone

A special water surface use regulation is enforced on the St. Croix River between the Taylors Falls dam and the Arcola Sandbar at the mouth of the Apple River. This area is designated as a “slow speed zone” where motorboat operation must be restricted to operating “at a leisurely speed, less than planing speed, whereby the wake or wash created by the motorboat is minimal.” Please obey all rules.

There is also a “slow - no wake” rule in effect within 100 feet of all shore, including islands, and within 100 feet of swimmers.

When water levels rise to 683 feet at Stillwater, a “slow - no wake” restriction goes into effect on the entire Lower St. Croix from Taylors Falls to Prescott. Signs at public accesses and marinas will notify the public if this restriction is imposed.

AQUATIC INVASIVE SPECIES (AIS) & DRAIN PLUG LAWS

See the DNR website (www.mndnr.gov/invasives) for more information:

✔ Clean visible aquatic plants, zebra mussels and other prohibited species from watercraft, trailers, and equipment before transporting from any water access.
✔ Drain water from bilge, livewell, motor, ballast tanks, and portable bait containers before leaving water accesses or shoreline property.
✔ Keep drain plug out and water-draining devices open while trailering or transporting watercraft.
✔ Dispose of unwanted bait, including minnows, leeches and worms, in the trash. It is illegal to release live bait into a waterbody and to release worms on the ground.
✔ Additional recommended precautions, not required by law … Spraying with high-pressure water, rinsing with very hot water, and/or drying boats and water-related equipment for at least five days is advised to remove or kill hard-to-see aquatic invasive species before moving to other water bodies.

No wake zones

Special “slow - no wake zones” (indicated with red hatch marks
on map) are enforced in congested and hazardous areas of the
river. In No Wake Zones, motorboat operation is restricted to
“the slowest possible speed necessary to maintain steerage, but
in no case greater than five miles per hour.” To improve safety
conditions and make the river experience more enjoyable for more
people, please obey the speed limits and maintain special vigilance
when traveling through such zones.

There is also a “slow - no wake” rule in effect within 100 feet of
all shore, including islands, and within 100 feet of swimmers.
When water levels rise to 683 feet at Stillwater, a “slow - no
wake” restriction goes into effect on the entire Lower St. Croix
from Taylors Falls to Prescott. Signs at public accesses and
marinas will notify the public if this restriction is imposed.
Restrictions on Boats Pulling Skiers, Tubes or Other Devices on the Lower St. Croix River

You may not tow water skiers, tubes or similar devices:

1. Anywhere on the Lower St. Croix between sunset and sunrise the following day,

2. In any of the slow speed or slow - no wake zones, except that in the 100 - foot shore zone a boat may launch or land a skier, tube or other device by the most direct route to open water,

3. From May 15th through September 15th, inclusive, after noon on Saturdays, Sundays and legal holidays in the area from the Arcola Sandbar (approximately river mile 31.0) to the end of the nine-foot navigation channel, north of Stillwater (approximately at river mile 24.5).

NOTE: Since 1999, the use of personal watercraft (Jet Skis, Wave Runners, etc.) has been prohibited by the National Park Service north of the MN DNR Boomsite Access - at appx. River Mile 24.8.

NOTE: Due to the possible spread of zebra mussels into the upper reaches of the St. Croix, the National Park Service has restricted most boat traffic originating downstream from passing the check-point near the Arcola High Bridge (Canadian National Railroad) - mile 28.6. Boaters may wish to check the National Park Service’s St. Croix website www.nps.gov/sacn for more up-to-date information.
No wake zones

Special “slow - no wake zones” (indicated with red hatch marks on map) are enforced in congested and hazardous areas of the river. In No Wake Zones, motorboat operation is restricted to “the slowest possible speed necessary to maintain steerage, but in no case greater than five miles per hour.” To improve safety conditions and make the river experience more enjoyable for more people, please obey the speed limits and maintain special vigilance when traveling through such zones.

There is also a “slow - no wake” rule in effect within 100 feet of all shore, including islands, and within 100 feet of swimmers.

When water levels rise to 683 feet at Stillwater, a “slow - no wake” restriction goes into effect on the entire Lower St. Croix from Taylors Falls to Prescott. Signs at public accesses and marinas will notify the public if this restriction is imposed.

Boater’s Notes
Personal watercraft prohibited upstream from Boomsite Access.

DANGER!

Upper St. Anthony Falls Lock Closed

Stay clear of area!
The adjacent falls and dam are extremely dangerous.

Paddlers: Take out no later than Flagpole Plaza / Hennepin Ave. Bridge.
New portage route available from Flagpole Plaza 854.4R to Bohemian Flats 853.1R.

Motorized access above the dam: Boom Island 854.8L. Below the dam: Hidden Falls Regional Park North Gate 846.5L.

Carry-in access above the dam at Bassett Creek 854.8R and Boom Island 854.6L. Below the dam: Bohemian Flats 853.1R and East River Flats 852.5L.

Lower St. Anthony Falls Lock and Ford Lock and Dam #1 have reduced hours of operation: 10 a.m. to 8 p.m., 7 days/week.

For further information:
U.S. Army Corps of Engineers
24/7 651-290-5936

CAUTION: Because of the narrowness of the channel on the
Minnesota River, approaching and/or passing barge traffic may
become hazardous.

CAUTION: St. Paul competitive rowing clubs use the area from
the Mendota Bridge (State Highway 55) to the Robert Street Bridge
(U.S. Highway 3). Steer clear of them and remember that boaters
are responsible for their own wake.

No wake zones

Special “slow - no wake zones” (indicated with red hatch marks
on map) are enforced in congested and hazardous areas of the
river. In No Wake Zones, motorboat operation is restricted to
“the slowest possible speed necessary to maintain steerage, but
in no case greater than five miles per hour.” To improve safety
conditions and make the river experience more enjoyable for
more people, please obey the speed limits and maintain special
vigilance when traveling through such zones.

THE SILENT KILLER – CARBON MONOXIDE

Passengers of nearly any boat with a motor on board can be victims of carbon monoxide poisoning. Carbon monoxide is an odorless, colorless, tasteless gas that can be toxic even in very small quantities.

Carbon monoxide’s effects are cumulative over time and there have been injuries and deaths caused by the infiltration of this poisonous gas into boats’ living and sleeping spaces, and also on the stern deck and swim platform area.

Common signs of carbon monoxide poisoning include irritated eyes, headache, nausea, weakness and dizziness. These symptoms can often be misdiagnosed as seasickness or intoxication!

A newly recognized phenomenon has been discovered where a swimmer died when they ventured too closely to a houseboat’s swim platform while engines or generators were running or have been overcome while being towed or dragged too near the stern of a boat. The U.S. Coast Guard has issued the warning that if your boat “has a swim platform and its electrical generator vents through the transom into a stern cavity, do not run your generator when not underway if someone is swimming in the area near the stern or sitting on the stern deck or swim platform.”

To help avoid the dangers of carbon monoxide on your watercraft:

★ Keep air flowing throughout the boat whenever any gas or diesel engine, generator or propane appliance is running.

★ Stay away from any area where engine or generator exhaust is vented.

★ Do not allow anyone to swim near the stern of the boat or sit on the stern deck or swim platform when the generator is running.

★ Do not leave your generator running at night, or when anchored, or when people are near the stern of a boat that is not in motion.

★ Do not ski, drag, or tube closer than 20 feet from a motorboat. Any closer, and carbon monoxide can be fatal!
☆ Install carbon monoxide detectors in the living areas of your boat, test them frequently and never remove the batteries unless you are replacing them with new ones.

☆ Keep your boat and motor properly maintained including keeping exhaust clamps tight and in place. Also, it’s a good idea to replace exhaust hoses if there is cracking or deterioration.

☆ If your boat is more than a few years old, hasn’t been regularly professionally inspected and maintained or the generator or other engine was originally installed by a “backyard mechanic,” have it checked by a service technician before you use it!
