# 2012 SMALL GAME HUNTER MAIL SURVEY 

Margaret Dexter, Wildlife Research Unit

## INTRODUCTION

The Minnesota Department of Natural Resources (DNR), Division of Fish and Wildlife, Wildlife Research unit annually conducts a survey of small game hunters. Annual harvest estimates from survey data provide guidance for future hunting regulations and season structure.

## METHODS

A postcard survey (Figure 1) was mailed in early March and respondents who returned it within three weeks were eliminated from follow-up mailings. In past years there were up to 4 mailings (initial and up to 3 follow-up mailings to non-respondents). After examination of mailing responses over the years it was determined that the majority of responses were received during the first two mailings. Therefore, the number of mailings was reduced to one initial and one follow-up to non-respondents this year. The size of the initial mailing was increased to maintain overall sample size.

The sampling frame consisted of individuals who purchased a small game hunting license (any type) for the 2012 small game hunting season ( $\mathrm{N}=294,837$ ). A stratified random sample, allocated proportionally by license type ( $n=7,000 ; 2.3 \%$ ) was drawn from the Minnesota DNR electronic database. License type was used as strata and included the following small game license types: Resident Senior Citizen, Resident Youth, Resident Adult, Resident Individual Sport, Resident Combination Sport, Resident Lifetime, Resident Lifetime Sport, Nonresident Youth, and Nonresident Adult. For analysis, license types were pooled into "Resident" ( $\mathrm{N}=288,712$ ) and "Nonresident" ( $\mathrm{N}=6,456$ ) (Figure 2).

Recipients were asked if they hunted small game during the 2012-13 season and if not, they were instructed to return the survey. Respondents who hunted were asked, (1) if they used a Walk-In Access area, (2) the total number of days they hunted small game, (3) the number bagged by species, (4) the number of days hunted by species and (5) the county in which they hunted most for each species listed (Figure 1).

Returned surveys were checked for completeness, consistency, and biological practicability. Dual key-entry and quality control checks were used to minimize transcription errors. Data was tabulated using Viking Data Entry VDE+ software and analyzed using R programming language (ver. 2.9.2; R Development Core Team [RDCT] 2009).

## RESULTS

Of the 7,000 mailed surveys, 109 were undeliverable; 3,520 were returned for an adjusted response rate of $51 \%$. This mail survey was initiated in 1976 as a means to gather small game harvest information. The response rate was initially very high (average $87 \%$ in first 5 years) but has been in a long term decline since the mid-1980s. That trend has been especially apparent
since 2004 and this year’s survey marks the lowest response rate ever recorded (Figure 3). This may have been due to the reduced number of mailings (two instead of 4) although typically 80\% of returns come during the first two mailings. Response rate is highest among license holders 50 to 70 years old and non-response is highest among the $18-35$ year olds (Figure 3). However, the number of license holders who reported they actually hunted has remained steady (Table 1).

Estimated number of hunters showed a mild to moderate increase for ducks, woodcock, ring-necked pheasants, mourning doves and coyotes (Table 2). Success rates for all species were fairly similar to last year as was estimated take per hunter (Tables 3 and 4). License sales increased from the previous year as did pheasant stamp sales and duck stamp sales (Figure 2, Table 5). Total estimated harvest for the top-four small game species in Minnesota is presented in Figure 4. Total estimated harvest for all small game species is presented in Table 5. Duck harvest appears to be the highest since 2003-04 and coyote harvest was the highest ever recorded. Several increases in harvest were noted with the highest being eastern cottontails and snowshoe hares. Survey results for selected species taken by Non-resident hunters are presented in Table 6.

The Walk-In Access (WIA) program started in 2011 as a 2-year pilot program funded by the U.S. Department of Agriculture Voluntary Public Access Program. The goal of WIA is to provide new hunting opportunities on private land that is already enrolled in existing conservation programs or lands with high quality wildlife cover. In order to estimate use of WIA areas, respondents were asked if they hunted a Minnesota WIA area. Twenty five percent of respondents indicated they used Walk-In Access areas (Figure 5), which when expanded indicates that an estimated 62,500 small game hunters took advantage of Walk-In Access areas

Note that all estimates were based on a survey of approximately $2 \%$ of all small game license holders.

## 2012 Small Game Hunter Report

1. Did you hunt small game, listed below, in Minnesota this year (March 2012 - Feb 2013)? $\square$ No $\square$ Yes (Please check box)
2. Did you hunt a Minnesota Walk-In Access area? $\square$ No $\square$ Yes
3. Indicate the total number of days spent hunting small game of all species listed below, in Minnesota.
4. For the species you hunted indicate your harvest, number of days hunted, and county in which you hunted most for each species, even if None were bagged. Report only game you personally bagged and retrieved in Minnesota. Do not include birds taken on shooting preserves or game farms.

|  |  | Number You bagged | Days Hunted | County |
| :---: | :---: | :---: | :---: | :---: |
| Ducks (all species) | 01 |  |  |  |
| Coots (mud hens) | 50 |  |  |  |
| Canada geese | 40 |  |  |  |
| Other geese | 41 |  |  |  |
| Snipe (jacksnipe) | 51 |  |  |  |
| Rails and gallinules | 52 |  |  |  |
| Crows | 53 |  |  |  |
| Woodcock | 60 |  |  |  |
| Mourning Dove | 65 |  |  |  |
| Pheasants | 70 |  |  |  |
| Ruffed grouse (Forest partridge) | 71 |  |  |  |
| Spruce grouse | 72 |  |  |  |
| Sharp-tailed grouse | 73 |  |  |  |
| Hungarian (Gray) partridge | 74 |  |  |  |
| Fox squirrel | 89 |  |  |  |
| Gray squirrel | 90 |  |  |  |
| Cottontail rabbit | 91 |  |  |  |
| Jackrabbit | 92 |  |  |  |
| Snowshoe hare | 93 |  |  |  |
| Badger | 35 | , |  |  |
| Coyote (brush wolf) | 97 |  |  |  |
| Gray fox | 96 |  |  |  |
| Raccoon | 94 |  |  |  |
| Red fox | 95 |  |  |  |

## Dear Small Game Hunter:

You have been selected at random from among Minnesota's small game hunting license buyers to assist us in evaluating the 2012-2013 small game hunting season (March 2012-February 2013). We need information to estimate the season's harvest and to help set future small game seasons. Answer only for your Minnesota 2012 hunting experience.

## YOUR RESPONSE IS NEEDED

 EVEN IF YOU DID NOT HUNT OR HARVEST SMALL GAMEPlease fill out the attached questionnaire and mail as soon as possible. A reminder will be sent to individuals not returning the questionnaire within three weeks. No envelope or stamp is necessary; just tear along the perforation and drop into a mailbox.

THANK YOU FOR YOUR COOPERATION
Ed Boggess, Director
Division of Fish and Wildlife
Department of Natural Resources

Harvest estimates in this table, and the number of hunters and mean take per hunter in Table 5, are calculated from different questions on the survey form. The sample used in calculations differs from one estimator to the next. This is because some respondents give specific answers to one question but not to a related one. A formula is used to calculate the total estimated take for each species that appear in this table. In most years the formula produces results rather close to those obtained by multiplying the average take per hunter times the number of hunters. However, in other years (e.g., 1985) results of the two methods are quite divergent, perhaps as a result of an unusual sample. This is being investigated further, and as a result, numbers may change somewhat in future reports. The most current report of survey findings will have the best data available at that time.
${ }^{\text {a }}$ Includes all types of Small game licenses. Duplicate licenses not included.
${ }^{\mathrm{b}}$ Estimates based upon response of hunters to questionnaires.
${ }^{\text {E }}$ Raccoon and red fox seasons were year round from May, 1994 through March 16, 2006.
${ }^{\text {d. }}$ Mourning dove season added 2004.
