

Permit Application for Appropriation of Waters of the State IRRIGATION

WARNING: ALL INFORMATION AND SUPPORTING DOCUMENTS SUBMITTED AS PART OF THIS APPLICATION BECOME PUBLIC INFORMATION. Omission of any data requested will delay the processing of your application and may result in its denial.

WHO APPLIES: Any individual, agency, corporation, or entity appropriating in excess of 10,000 gallons/day and/or 1 million gallons/year must obtain a Water Appropriation Permit from the Department of Natural Resources as prescribed by Minnesota Statutes, Chapter 103G and Minnesota Rules 6115.0600-6115.0810.

PROCEEDING WITHOUT A PERMIT. Any appropriation in excess of the above stated amounts without a permit constitutes a misdemeanor.

Note: Other federal, state, or local permits or approvals may also be required which are the responsibility of the applicant to obtain.

Application Instructions

Read ALL instructions carefully before filling out the application. Please type or print clearly.

APPLICANT

1-6. Fill in as directed.

PROJECT INFORMATION

7. SOURCE OF WATER: Mark only one box.

Note: Submit one application for each source of water or system. For example, several wells in the same aquifer manifolded together into one system constitutes one source; however, a stream and a gravel pit are two sources of water and would require separate applications. (Contact a DNR Waters office if you are unsure whether your project would require one or more applications).

- a. WELL Submit 1) a copy of the official Water Well Record, 2) test hole logs, and 3) pumping test data, all of which are available from the driller.
- b. MANIFOLDED WELLS Indicate the number of wells to be manifolded into one system. Submit the **SAME** information requested in 7.a. for EACH well to be used.

Note: If your well(s) is located in an aquifer for which hydrologic data is limited or unavailable, you may be required to submit information regarding domestic wells within a 1-1/2 mile radius of your irrigation well(s). The Department will advise you whether you are required to submit this information after the receipt of your application and Water Well Record(s).

c. STREAM, DITCH, or RIVER - Identify it and submit a contingency plan describing the alternatives you would utilize if the appropriation is restricted because of low water conditions. If no alternative water supply is available, you must submit a written statement agreeing to withstand the results of no appropriation.

Note: NO appropriation for irrigation from designated trout streams shall be approved.

- d. WETLAND, LAKE, or IMPOUNDMENT Identify it and submit the following:
 - 1) A contingency plan (see 7.c.).
 - 2) For basins less than 500 acres in size, you must:
 - a) Notify all riparian landowners and submit a list of those landowners.
 - b) Obtain a signed statement from as many of those riparian landowners as possible which states their support of the proposed appropriation.
 - c) Provide an accounting of the number of signatures of riparian landowners you are unable to obtain.
- e. OTHER Gravel pits, farm ponds, dug pits, etc. Submit information on:
 - 1) Physical dimensions (length-width-depth).
 - 2) Depth to water from land surface.

Note: Any proposed alteration of the beds or banks of the above mentioned water basins or streams may require a public waters permit from this Department. This may also include the construction of a pit in a wetland area. Contact a DNR Waters office for details.

- 8. POINT(S) OF TAKING/PUMPING SITE(S): Indicate the location of your wells(s) or pumping site(s) by completing a-e. Indicate this location to the nearest 10-acre tract by completing a. (ex. NW 1/4 of NE 1/4 of SE 1/4). If you plan to install multiple wells or pumping sites, attach a letter of explanation, including the legal description of each well/pump site, its pumping rate, and method of measurement.
- 9. MEANS OF TAKING AND RATE: If you mark "d.", specify the method to be used and the rate of taking (in gallons per minute or cubic feet per second). If multiple wells or pump sites are to be used, attach a letter of explanation (see #8).

- 10. METHOD OF MEASUREMENT: Fill in as appropriate.
 - Note: Flow meters are required by Minnesota Statutes 103G.281, Subdivision 2, for measuring the quantity of water appropriated within the degree of accuracy required by rule (10%). The DNR can approve other methods of measurement. Timing devices, including hour meters and electric meters, are approved devices if there is a constant rate of appropriation. To obtain approval for other methods of measurement, applicants must submit a written request with the application that includes a detailed description of the proposed method. Also of Note: All permit holders are required to measure and keep monthly and yearly records of the quantity of water used or appropriated.
- 11. LEGAL DESCRIPTION: Describe the property that will be affected by your project (example: T101N, R14W, Section 5, NW1/4 and N1/2 SW1/4). If property other than what you own will be affected, you must attach a copy of the land agreement which includes a) the legal description of the property, b) the termination date of the agreement, and c) the signature of all parties.
- 12-13. Fill in as appropriate.
 - 14. IRRIGATION SYSTEM TO BE USED: Mark the appropriate box. If you are using more than one system (example: 2 center pivots, or 1 center pivot and 1 traveling gun) to be run from the same source, mark the appropriate boxes and specify the number of acres to be covered by each system.
- 15-17. Fill in as appropriate.
 - 18. SOIL & WATER CONSERVATION PLAN: Indicate if a conservation plan, approved by the SWCD, has been developed for the acreage you propose to irrigate. An approved soil and water conservation plan or a written statement from the SWCD is required before a water appropriation permit can be issued. Please contact the SWCD regarding the development of a soil and water conservation plan.
 - 19. ADDITIONAL REQUIREMENTS: Submit the following as part of your application:
 - a. Map or air photo.
 - b. Describe alternative sources of water and methods considered and why the proposed alternative was selected.
 - c. Additional documents, letters, or statements required.
- 20. APPLICATION FEE: A minimum application fee of \$150 is required for each permit application. An application fee of \$300 is required for after-the-fact permit applications. Water use reporting and fees for years in which water appropriations occurred without a permit will also apply. Please do not submit fees with the permit application, you will be billed separately. Permits cannot be issued until all fees have been paid.

MAILING: Submit the following to the appropriate DNR Office (see map on back page for addresses):

- 1) application (keep a copy for your records).
- 2) supporting documents.
- 3) do not send application fee with the application. You will be billed separately.

Make sure that you furnish all information that is requested. Forms that are incorrectly filled out or lack requested information will cause a delay in your application.

LOCAL REVIEW: Minnesota Statutes allow local units of government 30 days to review your project and submit comments to the DNR. A copy of your application will be submitted by the DNR to:

- 1) local soil & water conservation district
- 2) watershed district
- 3) city

ADDITIONAL DATA: You may be required to submit additional information regarding your project. You will be notified if this information is required.

Questions

If you have any questions on the procedure for completing the application, please contact the DNR office serving you. The address and telephone number of each DNR office can be found on the back side of the application form.

Measuring Water Use & Flow Meter Requirements

Flow Meter Requirements

Minnesota Statutes § 103G.281, Subdivision 2, requires all installations for appropriating water to be equipped with a flow meter to measure the quantity of water appropriated within the degree of accuracy required by rule (10%). The commissioner may approve alternate methods of measurement based on the quantity of water used, the method of appropriating or using water and any other information supplied by an applicant.

Why require Flow Meters?

The law is aimed at improving the accuracy of water use reporting and has many benefits. Careful monitoring of water withdrawals can be used to: provide valuable information for management of the resource, detect well and pump problems, improve irrigation efficiency, and determine pumping plant efficiency. As a management tool, accurate flow monitoring can help to conserve both energy and water resources. Accurate data is necessary to evaluate the capability of the resource to sustain water withdrawals and is also important for investigation of well interference complaints.

Does everyone need a flow meter?

All new permitted installations will be required to have flow meters unless **prior** DNR approval has been given for an alternate method. Existing systems may be allowed to use an approved alternate method. Depending upon the type of system, water use and quantity of water used, the commissioner may approve alternate methods for measuring water use. Requests for approval of alternate methods must be submitted in writing to DNR Waters. Proper record keeping is required for all approved methods of determining water use.

When is a flow meter required?

Flow meters are required when alternate methods cannot provide an accurate measurement of water use. Flow meters will be required where the following circumstances exist:

- 1. Systems with widely fluctuating discharge rates or when variable speed pumps are used.
- 2. Systems with alternating zone coverage, such as golf course irrigation systems.
- 3. Instances where the permit holder has a history of providing inaccurate pumping reports or has failed to submit water use fees and reports.
- 4. Situations where the adequacy of the resource is a concern or there is a history of well interference problems.

What methods are approved?

The following methods are approved for measuring water use:

- 1. Flow meters with a totalizer.
- 2. Flow rate meters used with timing devices.† ‡
- Timing devices (hour meters and electric meters). † ‡
- 4. Vehicle gallon capacities (i.e. water trucks).†
- † Daily records of water use and time pumped **must** be kept for these methods.
- ‡ Methods 2 and 3 are require d to have a constant pumping rate.

What if I am using a gravity flow system?

Special instructions regarding gravity flow operations are available by calling DNR Waters and requesting the "Measuring Appropriations from Gravity Flow Installations" information sheet.

Which methods are not approved?

The following methods are not approved for measuring water use:

- 1. Rain gauges or other methods using application rates, such as irrigation systems that are set to apply a certain amount of water per acre or pass.
 - 2. Buckets used to measure discharge rates.
 - 3. Fuel consumption by gasoline or diesel engines.
- 4. Estimates using a set volume of water per person or animal.

How do I get my method approved?

Each year permittees are required to sign an affidavit of compliance on the water use report indicating compliance with the law requiring a flow meter or an approved measuring device. The affidavit of compliance and the annual report of water use are due by February 15 of each year.

Permittees using a method of measurement that has not been approved must submit a written request for approval of an alternate method. Requests should include a detailed description of the proposed method (i.e. diagrams, calculations). Requests for approval of an alternate method should be sent to DNR Waters, Permits Unit, 500 Lafayette Road, St. Paul, MN 55155-4032. Only methods that measure water use within 10 percent accuracy will be considered for approval. Records of water use must be kept for all methods of water use.

Failure to have an approved method is a violation of Minnesota Statutes and permit conditions and is punishable as a misdemeanor with fines up to \$700 and/or 90 days in jail.

General

To obtain information about the purchase and/or installation of a flow meter, contact a licensed well driller, irrigation equipment dealer or plumbing supply company.

Calculating Monthly Water Use

To calculate monthly water use from:

- A. **Flow Meter:** Subtract the reading at the beginning of the month from the reading at the end of the month. If the meter is in cubic feet, multiply the monthly use by 7.48 to convert the usage into gallons.
- B. **Timing Device:** Multiply the hours pumped for the month by the pump rate (in gallons per minute, gpm) times 60 (minutes). [Example; $150 \text{ hrs } \times 800 \text{ gpm } \times 60 \text{ min/hr} = 7,200,00 \text{ gallons}$].

Hourly timing device options:

- 1. An hourly time clock connected directly to irrigation pumping plant system.
- Kilowatt Hours: Monthly hours of pumping determined by dividing monthly electric usage by electric meter's monthly power demand rate (Kw). [Example: 3000 Kwh of electricity was used in the month of June and the electric meter recorded a peak demand for the month of 25 Kw, then the total hours pumped is found by dividing 3000 Kwh by 25 Kw, which yields 120 hours pumped for the month. To find water use take 120 hrs x 300 gpm x 60 min/hr = 2,160,000 gallons].

* Approved Alternatives for Estimating Water Pumping Rate from Agricultural Irrigation Systems

The following alternate methods are approved by the Department for agricultural irrigation systems.

- Pumping flow rate test.
- Center pivot/linear system's manufacturers nozzling chart.
 - for a center pivot with a corner swing unit, refer to the following section.
- Traveling gun nozzling chart.
- Lateral line irrigation systems nozzling chart.

- ____ gph per 100' of trickle tube* ____ feet/100
 ____ gpm
- Open discharge pump's manufacture curve.

ESTIMATING DISCHARGE OF A CENTER PIVOT WITH CORNER UNIT

A good average discharge flow rate estimate for a center pivot with a corner arm can be determined by taking the average of the discharge rate when the corner arm is fully extended and fully retracted.

The water discharge from a center pivot with a corner swing arm varies depending on the postion of the swing arm, usage of flow control/regulators, and the slope of the pump performance curve.

STEPS TO ESTIMATE GPM FOR A TRAVELING GUN

- Determine nozzle size to nearest 1/100th of an inch and nozzle type (bore or ring): [ex: 1-1/4" = 1.25 inches taper & bore nozzle].
- 2. Determine average operating pressure at the base of the sprinkler. If pressure varies between first and last travel runs, take the average between the first and last runs: [ex: 1st run = 95 psi, last run = 85 psi, average = (95 + 85)/2 = 90 psil.
- Select the appropriate discharge table (bore or ring nozzle) listed below and find the estimated gpm for your nozzle size and average operating pressure or use gun manufacturer's published discharge table.

If your nozzle size or operating pressure values follow between the table numbers, make an interpolation between the smaller and larger numbers to get a more accurate estimate of flow: [ex: have 1.25" bore nozzle @ 90 psi; table gives at 90 psi 405 gpm @ 1.2" and 545 @ 1.4"; then to estimate the gpm for 1.25" nozzle calculate as follows:

Typical Discharges for Single Large Nozzle Sprinkler Guns

Sprinkler	Straight	or tapei	bore no	ozzle size	es (inches)						
Pressure	0.8	1.0	1.2	1.4	1.6						
(psi)	Sprinkler discharge in gpm										
60	145	225	330	445	585						
70	155	245	355	480	630						
80	165	260	380	515	675						
90	175	275	405	545	715						
100	185	290	425	575	755						
110	195	305	445	605	790						
120	205	320	465	630	825						
Ring Nozzle Sizes (inches)											
	0.9	1.1	1.3	1.5	1.7						
(psi)	Spr	inkler dis	scharge i	n gpm							
60	110	185	275	385	510						
70	120	200	295	410	550						
80	130	215	310	435	585						
90	135	225	325	460	620						
100	140	240	340	485	655						
110	150	250	350	510	690						
120	155	260	360	530	720
