Hydrogeologic Cross Sections

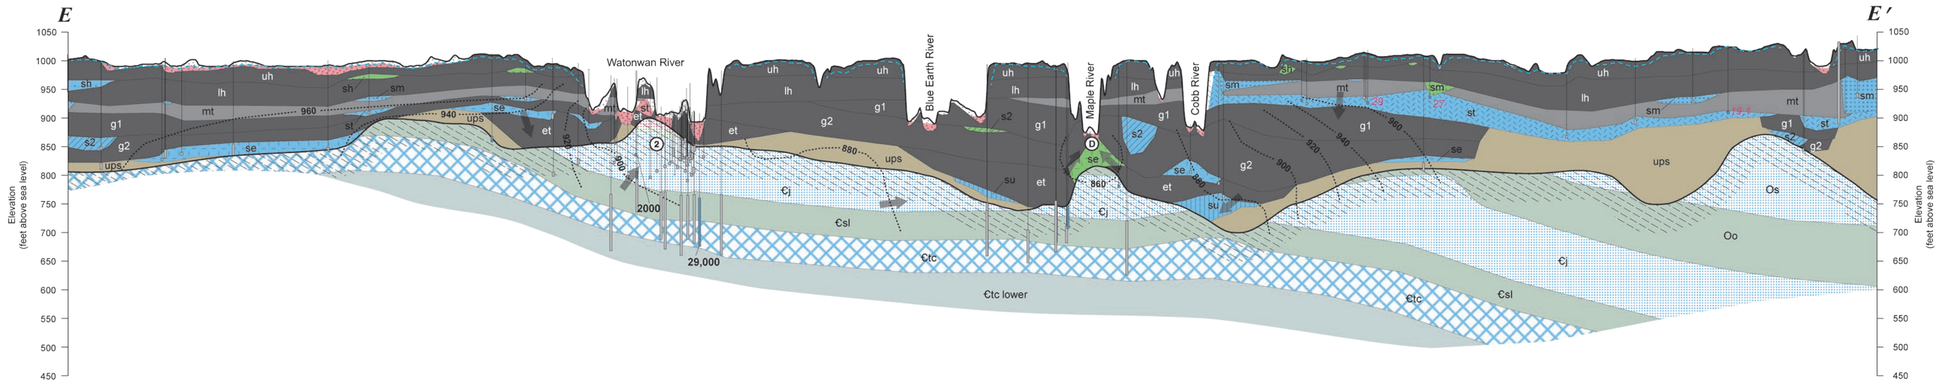
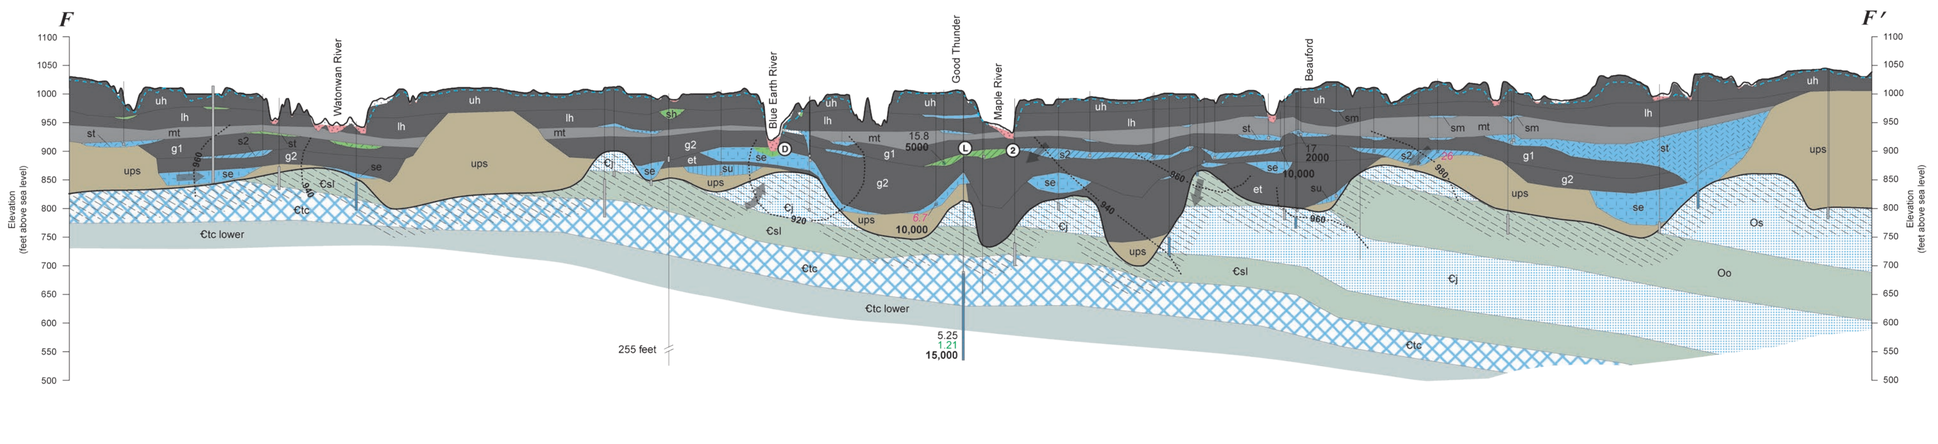
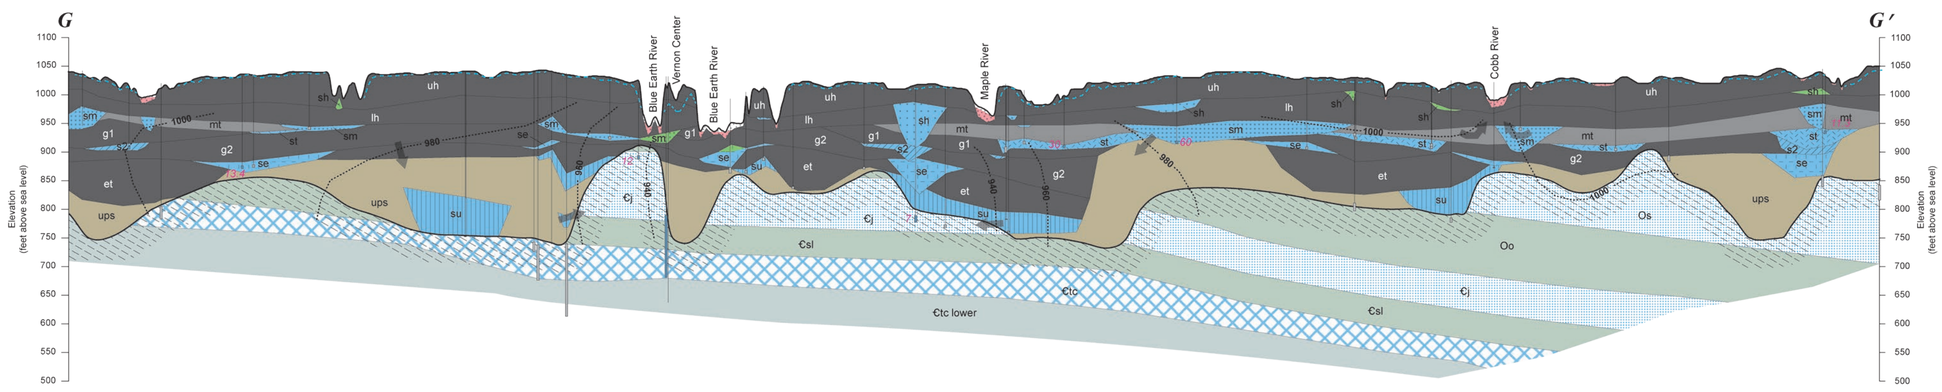
By James A. Berg

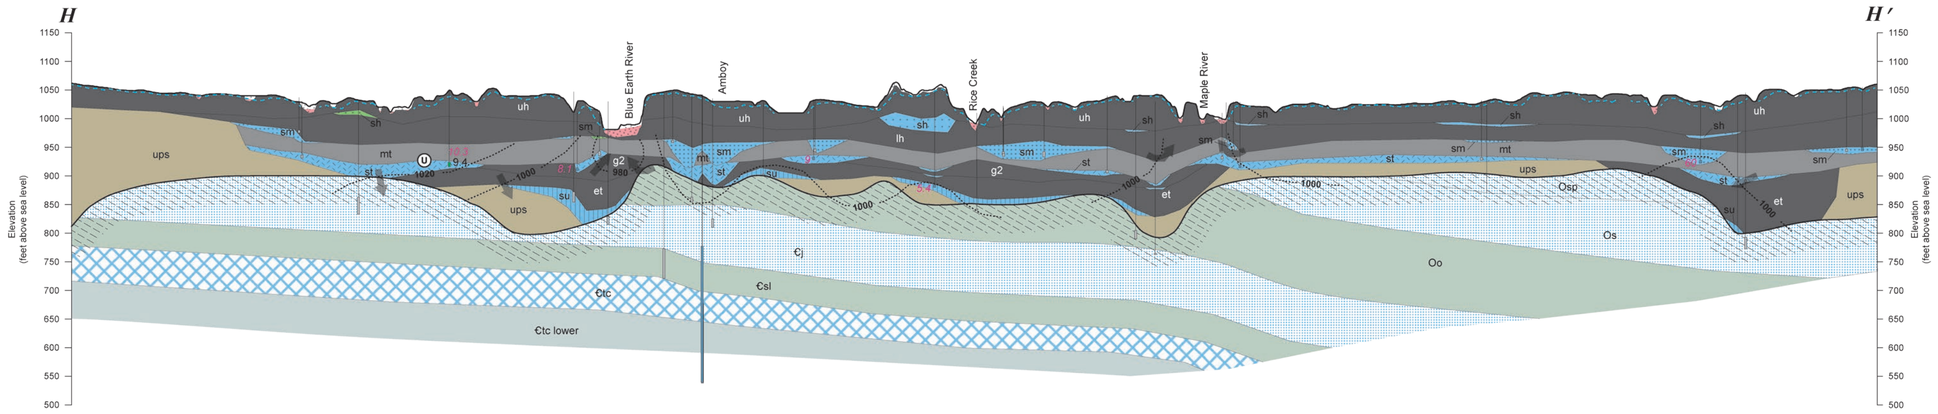
2016

Reference report section: Hydrogeologic cross sections









CROSS SECTION EXPLANATION

Tritium age

Darker color in small vertical rectangle (well screen symbol) indicates tritium age of water sampled in well. The color in the surrounding area indicates interpreted age of water in aquifer.

- Recent: water entered the ground since about 1953 (8 to 15 tritium units [TU]).
- Mixed: water is a mixture of recent and vintage waters (greater than 1 TU to less than 8 TU).
- Vintage: water entered the ground before 1953 (less than or equal to 1 TU).
- Well was not sampled for tritium.

Symbols and labels

- 13.4 — If shown, arsenic concentration equals or exceeds 5 parts per billion.
- 15.8 — If shown, chloride concentration equals or exceeds 5 parts per million.
- 1.21 — If shown, nitrate-nitrogen concentration equals or exceeds 1 part per million.
- 15,000 — If shown, groundwater residence time in years, estimated by carbon-14 (^{14}C) isotope analysis
- General groundwater flow direction
- ···· 900 ···· Approximate equipotential contour; contour interval 20 feet
- Geologic contact
- Land or bedrock surface
- Water table

LOCATION DIAGRAM

Groundwater conditions

(Some conditions shown are interpreted and do not correspond to tritium data locations.)

- (2) Groundwater moves from an overlying surficial aquifer to a buried aquifer
- (D) Groundwater discharge from a buried aquifer to surface water
- (L) Groundwater flows laterally
- (U) Groundwater flowpath is unknown (deep groundwater with recent or mixed tritium age)

This map was compiled and generated in a geographic information system (GIS). Digital data products, including chemistry and geophysical data, are available from the DNR Ecological and Water Resources Division page (mndnr.gov/groundwater-mapping).

This map was prepared from publicly available information only. Every reasonable effort has been made to ensure the accuracy of the factual data on which this map interpretation is based. However, the Department of Natural Resources does not warrant the accuracy, completeness, or any implied uses of these data. Users may wish to verify critical information; sources include both the references in the report and information on file in the offices of the Minnesota Geological Survey and the Minnesota Department of Natural Resources. Every effort has been made to ensure the interpretation shown conforms to sound geologic and cartographic principles. This map should not be used to establish legal title, boundaries, or locations of improvements.
