

Dock Public Information Meeting
August 30, 2007
Wayzata, MN

Meeting Notes

Why were dock changes made in 2002?

What will happen with the input from these meetings?

When will the new general permit be done?

References to fish – Are there other studies besides the one on Bergen Lake and how do we access those studies?

What does the width of a dock have to do with raising fry fish?

The process (ability) to obtain a permit needs to improve.

Does fish spawning have to do with the size of a dock or the quietness of the area?

Is this really a dock issue?

Wish DNR would look more at the riparian right aspect (trends).

Looking at too general an issue. Each lake in the state is different. This should be a local issue.

Who came up with and how did we arrive with the 170 sq. ft.?

The concern is platforms?

Dock industry will have to beef up their inventory in November and December – what will they be building?

Want to make sure dock dealers comply with rules when a customer asks for something bigger than the rule allows.

Who will make the decisions and will there be studies that justify the decisions?

Will there be exceptions of the rule for border waters, rivers, etc.?
