

How to Plant a Bareroot Seedling

Coniferous
Seedling

Deciduous
Seedling

- 1** Keep roots moist at all times.
Dry roots die.
- 2** Dig a hole twice as wide as and slightly deeper than root length.
- 3** If hole cannot be dug deep enough to fit entire root system, trim roots with scissors to same length as seedling's above ground height or 8 inches, whichever is longer.

Cut only if needed.

Celebrate Arbor Month—plant trees.

FORESTRY

4 Place roots in hole so top of first root is slightly below surface level.

5 Distribute roots evenly, making sure roots are straight and not doubled over or “J” rooted.

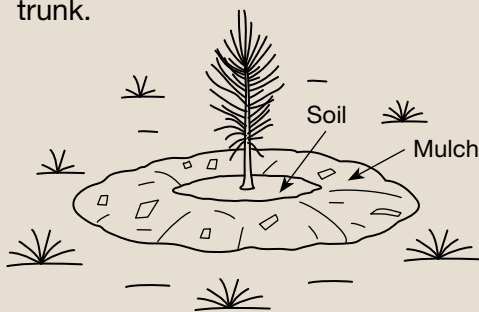

Don't create a “J” root.

6 Backfill hole to slightly above top of first root.

7 Heel in soil with foot to remove air pockets.

8 Water entire backfill area.

9 When feasible, place mulch around seedling, keeping mulch away from trunk.

Don't create a mulch volcano.
