

AN ACTION PLAN FOR MINNESOTA WILDLIFE

NORTH SHORE HIGHLANDS SUBSECTION PROFILE

Minnesota's Comprehensive Wildlife Conservation Strategy

SUBSECTION OVERVIEW

The North Shore Highlands Subsection is a narrow strip 20 to 25 miles wide that follows the shoreline of Lake Superior from Duluth to the eastern tip of Minnesota. Lake Superior dominates the area and moderates its climate. The terrain varies from gently rolling hills to steep cliffs. There are 20 lakes larger than 160 acres in size. Numerous short streams, 10 to 15 miles in length, run from the highland to the shore of Lake Superior, most ending in waterfalls near the shoreline. A mosaic of forest habitats stretches across this landscape, heavily influenced by aspen-birch, with minor amounts of white and red pine, mixed hardwood-pine, and conifer bogs and swamp.

Recreation, tourism, and forestry are the predominant land uses in this subsection. There is tremendous development pressure along the highly environmentally sensitive Lake Superior shoreline, and second-tier development beyond the shoreline looks to be the next significant growth area. The North Shore Highlands is host to the popular North Shore State Trail, which is a major snowmobile destination. Parts of this trail are currently being considered for possible summer season ATV use, as are other areas along the shore. Much of the white pinered pine forests have been logged and replaced with quaking aspenpaper birch. This subsection contains significant old-growth northern hardwood and upland northern white cedar forest. The subsection also contains the highest density of designated trout streams in Minnesota. The source of water for most of these streams is surface runoff.

SPECIES IN GREATEST CONSERVATION NEED

84 Species in Greatest Conservation Need (SGCN) are known or predicted to occur within the North Shore Highlands. These SGCN include 25 species that are federal or state endangered, threatened, or of special concern. The table, SGCN by Taxonomic Group, displays by taxonomic group the number of SGCN that occur in the subsection, as well as the percentage of the total SGCN set represented by each taxon. For example, 10 mammal SGCN are known or predicted to occur in the North Shore Highlands, approximately 46% of all mammal SGCN in the state.

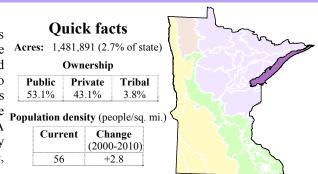

SGCN BY TAXONOMIC GROUP

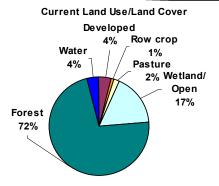

Taxa	# of SGCN	Percentage of SGCN Set by Taxon	Examples of SGCN
Amphibians	2	33.3	Eastern red-backed salamander
Birds	50	51.5	Black-throated blue warbler
Fish	8	17.0	Lake chub
Insects	9	16.1	Extra-striped snaketail dragonfly
Mammals	10	45.5	Canada lynx
Mollusks	2	5.1	Black Sandshell
Reptiles	3	17.6	Wood turtle
Spiders	0	0	NA

SPECIES SPOTLIGHT

Black-throated blue warbler (Dendroica caerulescens)

Distribution	Limited to selected areas of hardwood and mixed
	hardwood-coniferous forests of northeastern Minnesota.
Abundance	Rare, and limited to specific habitat areas of northeastern
	Minnesota, particularly along the North Shore of Lake
	Superior at Tettegouche State Park.
Legal Status	Federally protected migratory bird.
Comments	Population considered stable, but more assessment needed
	to determine long-term trends.

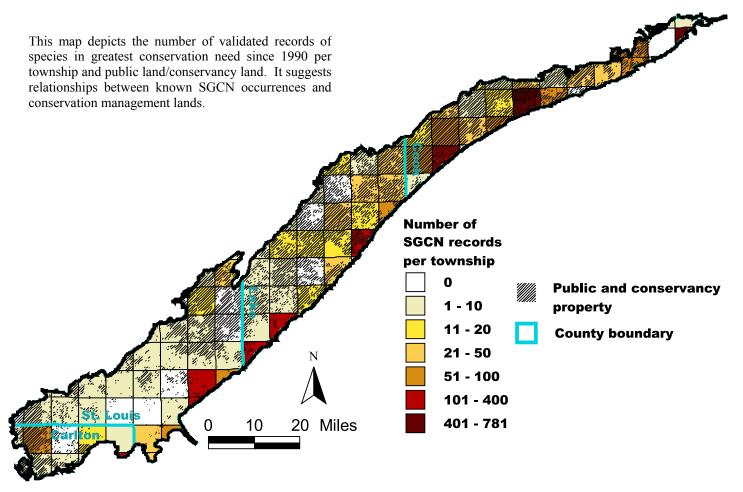

HIGHLIGHTS

- The North Shore Highlands and associated waters of Lake Superior are home to bald eagles, peregrine falcons, common terns, Franklin's ground squirrels, Connecticut warblers, boreal owls, merlins, common ravens, northern myotis, deepwater sculpin, and kiyi.
- This is one of the most important and visible migratory corridors for songbirds and raptors in the entire Midwest as birds pass along the North Shore and over Hawk Ridge every fall.
- Rivers and associated forests within this subsection provide important habitat for wood turtles.
- Areas important for SGCN include Cloquet Valley, Finland, Pat Bayle, and Grand Portage SFs; and many SPs and SNAs along the North Shore of Lake Superior.

Tomorrow's Habitat for the Wild and Rare: An Action Plan for Minnesota Wildlife

Sources: MN DNR Natural Heritage database, MN DNR County Biological Survey (MCBS), MN DNR Statewide Mussel Survey, MN DNR Fisheries Fish database. Areas with no MCBS animal surveys may have had mussel and fish surveys, as well as reports of other species occurrences recorded in the MN DNR Natural Heritage database.

SPECIES PROBLEM ANALYSIS

The species problem analysis provides information on the factors influencing the vulnerability or decline of SGCN that are known or predicted to occur in the subsection. The table lists the nine problems, or factors, used in the analysis, and the percentage of SGCN in the subsection for which each factor influences species vulnerability or decline. The results of the species problem analysis indicate that habitat loss and degradation in the subsection are the most significant challenges facing SGCN populations.

NOTE: The inverse of the percentages for each problem does not necessarily represent the percentage of SGCN for which the factor is not a problem, but instead may indicate that there is not sufficient information available to determine the level of influence the factor has on SGCN in the subsection.

Problem	Percentage of SGCN in the Subsectior for Which This Is a Problem						
Habitat Loss in MN	73						
Habitat Degradation in MN	82						
Habitat Loss/Degradation Outside of MN	38						
Invasive Species and Competition	26						
Pollution	26						
Social Tolerance/Persecution/Exploitation	25						
Disease	1						
Food Source Limitations	2						
Other	6						

KEY HABITATS - For Species in Greatest Conservation Need

The CWCS identified key habitats for SGCN within the subsection using a combination of five analyses, labeled A-E below. The table depicts the five analyses, and under which analyses the key habitats qualified. To qualify as a key habitat for the subsection, the habitat had to meet the criteria used in at least one of the five analyses, as specified in the descriptions to the right of the table. The graphs below depict results from four (A-D) of the five analyses used in determining key habitats. Those habitats that meet the criteria are highlighted in **RED** in the graph for that analysis. Those habitats that do not meet the criteria are shaded in **GOLD**. Analysis E is not represented by a graph; the results of this analysis are presented as a list of key rivers/streams in Appendix I. For a more detailed explanation of the five analyses used, see <u>Chapter 7</u>, <u>Methods and Analyses</u>.

	ANALYSIS								
KEY HABITATS	Α	В	С	D	Е				
Forest-Upland Coniferous (Red-white pine)	X	X	X						
Forest-Lowland Coniferous		X							
Shoreline-dunes-cliff/talus		X							
Lake-Deep				X					
<u>River-Headwater to Large</u>					X				

Description of Analyses

A: <u>Terrestrial habitat use analysis</u> - terrestrial habitats that represent more than 5% of 1890s or 1990s landcover and are modeled to have the most SGCN using them based on a z-test with p<0.01.

B: <u>Specialist terrestrial habitat use analysis</u> - terrestrial habitats that represent more than 5% of 1890s or 1990s landcover and have more than 15 species, 20% of which use 2 or fewer habitats (specialist species).

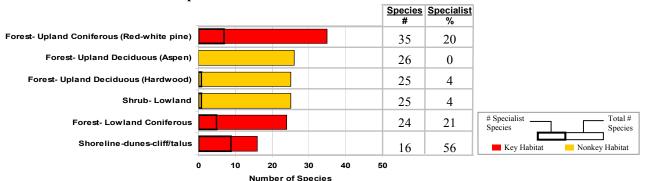

C: <u>Terrestrial habitat change analysis</u> - terrestrial habitats that represent more than 5% of the 1890s landcover and have declined by more than 50% in the 1990s landcover. For wetlands this change was based on an analysis done by Anderson & Craig in *Growing Energy Crops on Minnesota's Wetlands: The Land Use Perspective* (1984).

D: <u>Aquatic habitat use analysis</u> - lake or stream habitats that have the most SGCN use based on a z-test with p<0.01 of all subsections.

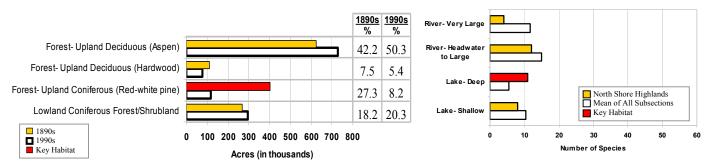

E: <u>The Nature Conservancy/SGCN occurrence analysis</u> - stream reaches identified in the Areas of Aquatic Biodiversity Significance in the four TNC Ecoregional Assessments and reaches with high SGCN occurrences (see <u>Appendix I</u> for list of stream reaches).

D – Aquatic Habitat Use

A/B – Terrestrial Habitat Use/Specialist Terrestrial Habitat Use

C – Terrestrial Habitat Change

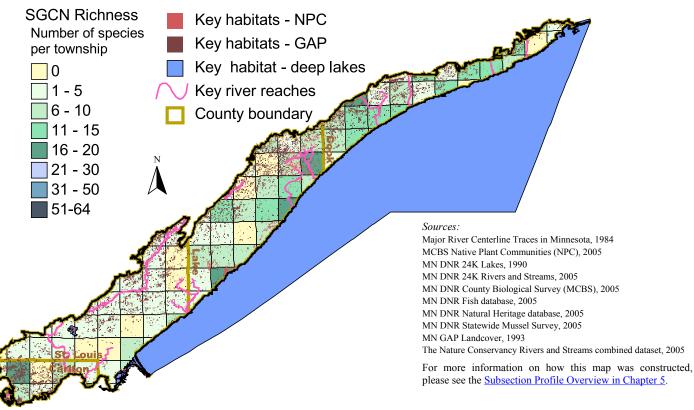

E – The Nature Conservancy/SGCN Occurrence

To reference the key rivers and streams for the subsection, see Appendix I.

DISTRIBUTION OF KEY HABITATS AND SPECIES RICHNESS BY TOWNSHIP

This map depicts key habitats and the number of species of SGCN per township based on the sources listed below. It suggests there is often a relationship between key habitats and species richness (i.e., the variety of species of SGCN in a township).

SUBSECTION HABITAT PERCENTAGES AND HABITAT USE BY SGCN TAXA

This table presents information on the percentages for each habitat in the subsection (showing changes in coverage between the mid- to late 1800s and the 1990s), as well as habitat use by SGCN taxonomic group. Habitats are listed in ranked order for percent coverage within the subsection in the 1990s. Key habitats for the subsection (as identified on previous page) are listed in **BOLD**. SGCN habitat use is broken down by taxonomic group, with a total number of species for all taxonomic groups listed at the far right of the table.

			SGCN BY TAXONOMIC GROUP							Р	
HABITAT	Percentage of Subsection (1890s)	Percentage of Subsection (1990s)	Amphibians	Birds	Fish	Insects	Mammals	Mollusks	Reptiles	Spiders	Total Number of Species
Forest-Upland Deciduous (Aspen)	42.2	50.3	2	18			6				26
Forest-Lowland Coniferous	18.2	20.3		17		2	5				24
Forest-Upland Coniferous (Red-white pine)	27.3	8.2	2	21		4	8				35
Forest-Upland Deciduous (Hardwood)	7.5	5.4	2	16		1	6				25
Shrub/Woodland-Upland	0.7	4.9	1	11		3	8				23
Lake-Deep	N/A	2.9		2	7	1			1		11
Developed	N/A	2.7		5			4				9
Grassland	N/A	1.8		12			6		1		19
Cropland	N/A	1.1		3			2				5
Forest-Lowland Deciduous	0.1	0.9		12		1	5				18
Lake-Shallow	N/A	0.8		5					2		7
Wetland-Nonforest	0.1	0.7		20			4		2		26
Shoreline-dunes-cliff/talus	N/A	N/A		11		1	4				16
Shrub-Lowland	N/A	N/A	1	16		1	6		1		25
River-Headwater to Large	N/A	N/A		2	2	3		2	3		12
River-Very Large	N/A	N/A		1				1	2		4

N/A: Insufficient data available to determine percent coverage within subsection. We have no data to indicate the existence of cropland, grassland, or developed land prior to settlement by people of European descent, although these land uses likely did occur at very low levels. NOTE: 0.0 indicates less than 0.05 percent coverage.

Ten-Year Goals, Management Challenges, Strategies, and Priority Conservation Actions

Goal I: Stabilize and increase SGCN populations

Management Challenge 1 – There has been significant loss and degradation of SGCN habitat Strategy I A – Identify key SGCN habitats and focus management efforts on them

- Priority Conservation Actions to Maintain, Enhance, and Protect the Key Habitats
- 1. Upland coniferous red-white pine forest habitats, actions include:
 - a. Incorporate SGCN habitat concerns in forest management planning
 - b. Provide technical assistance and protection opportunities to interested individuals and organizations
- 2. Lowland coniferous forest habitats, actions include:
 - a. Incorporate SGCN habitat concerns in forest management planning
- b. Provide technical assistance and protection opportunities to interested individuals and organizations
- 3. Shoreline, dune, cliff/talus habitats, actions include:
 - a. Support the protection of these habitats from damaging development
 - b. Enhance SGCN habitat along the shoreline
 - c. Enhance SGCN habitat within dune communities
 - d. Provide technical assistance and protection opportunities to interested individuals and organizations
- 4. <u>Stream habitats</u>, actions include:
 - a. Maintain good water quality, hydrology, geomorphology, and connectivity in priority stream reaches
 - b. Maintain and enhance riparian areas along priority stream reaches
 - c. Provide technical assistance and protection opportunities to interested individuals and organizations
- 5. Deep lakes habitats, actions include:
 - a. Maintain good water quality in deep lakes
 - b. Enhance near-shore terrestrial and aquatic habitats
 - c. Provide technical assistance and protection opportunities to interested individuals and organizations

Management Challenge 2 – Some SGCN populations require specific management actions Strategy IB – Manage federal and state listed species effectively

Priority Conservation Actions for Specific SGCN

- 1. Implement existing federal recovery plans
- 2. Develop and implement additional recovery plans
- 3. Provide technical assistance to managers, officials, and interested individuals related to listed species
- 4. Enforce federal and state endangered species laws, as well as other wildlife laws and regulations

Strategy I C – Manage emerging issues affecting specific SGCN populations

Priority Conservation Actions for Specific SGCN

- 1. Work with partners to effectively address emerging issues affecting SGCN populations
- 2. Enforce federal and state wildlife laws and regulations

Goal II: Improve knowledge about SGCN

Management Challenge 1 – More information about SGCN and SGCN management is needed Strategy II A – Survey SGCN populations and habitats

Priority Conservation Actions for Surveys

- 1. Survey SGCN populations within the subsection, actions include:
 - a. Continue MCBS rare animal surveys
 - b. Survey SGCN populations related to key habitats
 - c. Survey wildlife taxa underrepresented by MCBS animal surveys
 - Survey SGCN habitats within the subsection, actions include:
 - a. Assess the amount and quality of key habitats and map their locations

Strategy II B – Research populations, habitats, and human attitudes/activities

Priority Conservation Actions for Research

2.

- 1. Research important aspects of species populations within the subsection, actions include:
 - a. Better understand the life history and habitat requirements of important SGCN

Priority Conservation Actions for Research (continued)

- 2. Research important aspects of SGCN habitats within the subsection, actions include:
 - a. Identify best management practices for maintaining and enhancing key habitats
 - b. Identify important patterns and distributions of key habitats to better support SGCN populations
 - c. Identify important functional components within key habitats to support specific SGCN
 - d. Explore important, emerging SGCN habitat management issues
- 3. Research important aspects of people's understanding of SGCN within the subsection, actions include:
 - a. Identify people's attitudes and values regarding SGCN
 - b. Identify places and ways people can enjoy and appreciate SGCN

Strategy II C – Monitor long-term changes in SGCN populations and habitats

Priority Conservation Actions for Monitoring

- 1. Monitor long-term trends in SGCN populations, actions include:
 - a. Continue existing population monitoring activities
 - b. Develop additional monitoring activities for specific SGCN populations
- 2. Monitor long-term trends in SGCN habitats, actions include:
 - a. Develop long-term monitoring activities for important SGCN habitats

Strategy II D – Create performance measures and maintain information systems

Priority Conservation Actions for Performance Measures and Information Systems

- 1. Create and use performance measures, actions include:
 - a. Develop partner-specific performance measures within the subsection
 - b. Develop project-specific performance measures for SWG-funded projects
 - c. Actively incorporate monitoring and performance measure information to enhance adaptive management
- 2. Maintain and update information management systems

Goal III: Enhance people's appreciation and enjoyment of SGCN

Management Challenge 1 – Need for greater appreciation of SGCN by people Strategy III A – Develop outreach and recreation actions

Priority Conservation Actions for Outreach and Recreation

- 1. Create new information and communicate with people to enhance their appreciation of SGCN
- 2. Create opportunities for people to appropriately enjoy SGCN-based recreation

Tomorrow's Habitat for the Wild and Rare: An Action Plan for Minnesota Wildlife

How to use this subsection profile

Intended audience: Natural resource professionals and interested stakeholders

- Identify how the priority conservation actions and key habitats intersect and inform your current and future priorities.
- Using your additional insights and local knowledge, "step-down" the priority conservation actions into more detailed actions and practical on-ground tasks.
- Use it to understand species in greatest conservation need priorities and tell a story about the subsection (its history, biology, ecology, demography) to other natural resource professionals, managers, decision makers and land owners.
- Visit our website, or give us a call, and tell us how you're using it, how others are using it, and ideas that "step-down" the priority conservation actions.
