Birding Opportunities at Savanna Portage State Park

Savanna Portage State Park consists of over 15,000 acres of bogs, marshes, lakes, rivers and rolling hills. This northern park boasts a diversity of songbirds. Thirty species of neotropical warblers and vireos occur in the park, the vast majority of which remain to nest during June and July. Due to a high population of small mammals, the park also provides important habitat for owls. Great gray, great horned, barred, long-eared, short-eared and northern saw-whet owls occur in the park. The boreal owl has been recorded in winter.

Season and Abundance Key

The **seasons** in the checklist are defined as follows:

Sp (Spring) = March, April, May

Su (Summer) = June, July

Fa (Fall) = August, September, October, November

Wi (Winter) = December, January, February

Abundance codes are defined as follows:

C = Common — present, relatively easy to find

U = Uncommon — observed, may be difficult to find

O = Occasional — may or may not be present in any year

R = Rare — has occurred at least once, may or may not be expected to recur

The names and taxonomic arrangement of species follows that of the Checklist of the Birds of Minnesota (January, 2001), prepared by the Minnesota Ornithological Records Committee.

This checklist contains the names of all birds that have been documented in the park by reliable observers. It was constructed by Robert B. Janssen and the MN DNR-Division of Parks & Recreation using observations of Mr. Janssen, park staff and other observers, as well as Minnesota Ornithologist's Union records and data contained in research reports. If you are interested in the specific sources used for a particular park, contact the Parks Division Resource Management Program Coordinator by telephone at 651-297-1158 or by mail at MNDNR-Parks, 500 Lafayette Road, Box 39 St. Paul, MN 55155-4039.
