THE VEGETATION OF MILLE LACS COUNTY

NATIVE PLANT COMMUNITIES AND RARE SPECIES IN
MILLE LACS COUNTY, MINNESOTA

Minnesota County Biological Survey  March 2006

The Minnesota County Biological Survey mapped areas with native plant communities. The survey extended from June 2002 to June 2003. Areas were mapped using Global Positioning System equipment to a scale of 1:24,000. A custom database was used to identify native plant communities. The database represents the most current information available. Native plant community boundaries were drawn for each occurrence of a species. Rare species are mapped as they are identified.

THE VEGETATION OF MILLE LACS COUNTY

The image shows the vegetation of Mille Lacs County in the form of a map. The map includes various plant communities and rare species. The legend provides a key to the symbols and colors used on the map. The map also includes a key to the vegetation types, which are color-coded and labeled. The vegetation types include forest, wetland, meadow, and other land cover types. The map is intended to provide a visual representation of the vegetation present in Mille Lacs County.
