There are many deposits of copper, nickel, and Platinum Group Metals (PGM) resources in the bedrock along approximately 60 miles of the edge of the Duluth Complex near Babbitt, Minnesota. This map shows the locations of the deposits, state metallic mineral leases, and federal hardrock leases and prospecting permits. There is another discovery of copper, nickel, and PGM at Tamarack (shown in the Tamarack Map below), which is located along the west flank of the Midcontinent Rift approximately 100 miles southwest of the Babbitt area deposits. The discovery is contained within an intrusion that is associated with the Midcontinent Rift.
