Public Access info: All motorized and non-motorized watercraft include any vessel propelled by motor or sail. Some watercraft are available to authorized users, including those with disabilities, through the Department of Natural Resources (DNR). Preview the DNR License Information Center for details.

Aquatice Invasive Species (AIS) Laws and Requirements: The AIS are aquatic plants and animals that can be moved from water in which they are already established to new bodies of water and can thrive and multiply in the new environment. AIS can consume oxygen and nutrients, or compete with native species, thus reducing their growth and survival. To prevent the introduction and spread of AIS, you should clean and drain your watercraft before and after use and before entering new aquatic systems. The DNR provides a detailed guide on how to clean and drain your watercraft.

SELECTIVE HARVEST FISHING: This practice involves removing slower-growing fish to improve the quality of fishing for the remaining fish. DNR encourages anglers to use selective harvesting methods to promote the health of our aquatic ecosystems. For more information, refer to the Minnesota DNR’s selective harvesting guidelines.

Working Together To Protect the Waters: To protect Minnesota’s waters, you can support water quality regulations, volunteer for lake cleanups, and educate others about the importance of water conservation. Participating in these activities not only helps preserve water resources but also strengthens the bonds within our communities.

Accessories Available: Public water access sites developed after 2012 have been designed with accessible parking spaces and accessible routes to the top of the boat ramp. Some sites have additional accessible routes to a dock or other site amenities. These sites are identified with the red, accessible symbol shown above.

Clean your watercraft, Drain all water, Dispose of unused bait. Federal Aid Project funded by the purchase of fishing equipment and motor boat fuels.
