ABOUT THIS GUIDE

The Minnesota Department of Natural Resources (MN DNR) has prepared this guide to provide an easy format for finding public water accesses. The guide includes trailered boat launches, carry-in launches, fishing piers, and developed shore-fishing sites that are in the seven counties that make up the Twin Cities metropolitan area and suburbs.

An index of maps is located on the inside back cover, and the number on each rectangle corresponds to a map in the guide. All questions about a specific facility shown on a map should go directly to the administrator of the site. The list of site administrators is found on pages 161-167.

How to read the maps
Each facility on the map is assigned a number and color. The number corresponds to the facility listed on the information page. The color of each icon represents access type, and corresponds with the facility key at the bottom of each page.

For example, on Map 42 (a portion of which is shown below) at the Rum River Central Regional Park is a pink (#2) trailer access, a teal (#3) carry-in access and a yellow (#4) fishing pier. Additionally, there is also a fee and a special regulation for the access in this park.
DNR public water accesses are open 24 hours a day unless otherwise posted. Hours may vary at non-DNR public accesses. It’s free to launch boats at DNR public accesses, but most state, county, city and regional parks require a motor vehicle entrance fee/permit. Restrooms and boarding docks are usually located at busy sites. All motorized and most non-motorized watercraft must be licensed by the DNR.

Many lakes in the Twin Cities metro area have local water surface-use rules in effect. These are marked with this special regulations symbol 🚪. This is a management tool used to enhance recreation use, safety, and enjoyment of lakes and rivers. Restrictions can include motor type and size, speed limits, direction of travel, time of day zoning (water skiing), and area zoning, including slow-no-wake zones. Water surface use rules are enforced by county sheriff deputies and DNR conservation officers.

Many of the facilities listed in this booklet are not staffed on a regular basis. Changing conditions may arise at public water accesses due to a variety of factors such as high use, high water levels, or vandalism. Please report any problems or issues encountered at the facility to the site administrator.
AQUATIC INVASIVE SPECIES (AIS) LAWS AND REQUIREMENTS

Required actions
Before leaving the water access or shoreline property you MUST:

✓ CLEAN all visible aquatic plants, zebra mussels, and other prohibited invasive species from watercraft, trailers, and water-related equipment before leaving any water access or shoreland.

✓ DRAIN water-related equipment (boat, ballast tanks, portable bait containers, motor) and drain bilge, livewell, and baitwell by removing drain plugs. Keep drain plugs out and waterdraining devices open while transporting watercraft.

✓ DISPOSE of unwanted bait, such as minnows, leeches and worms, in the trash. If a trash receptacle is not available at the access, please dispose of your bait in an off-site trash receptacle. It is illegal to release live bait into a water body, release aquatic animals, from one water body to another, or transport lake and river water. If you want to keep your live bait you must refill the bait container with bottled or purified tap water.

Additional recommendations
Some invasive species are small and difficult to see. Take one or more of the following precautions before moving to another water body, especially after leaving zebra mussel and spiny waterflea-infested waters:

✓ SPRAY with high-pressure water.

✓ RINSE with very hot water (120°F for at least two minutes; or 140°F for at least 10 seconds).

✓ DRY for at least five days.
  • Run motor for a few seconds to discharge water before leaving a water access.
  • Clean anchors, ropes, fishing tackle, and other objects that were in the water. Many species can be transported in the mud or on fishing lines and rope.
  • Dump water out of canoes, kayaks, and other watercraft before leaving the water access.
  • Transport fish on ice. Be prepared; bring a cooler.
Working together to protect the waters
Watercraft inspectors help to ensure that all watercraft and equipment are “clean in, clean out!” If you need assistance, have questions about the laws, or are curious about the program, please ask!

How you can help the watercraft inspectors?
When you see watercraft inspectors, please be cooperative. The law requires compliance with inspectors, and it will help everyone to be on their way in a timely and pleasant manner.

Please clean your boat and pull your plug as soon as you are safely able to. This way, the inspection process will progress quickly when the inspector checks your equipment.

If there is a decontamination unit present, please follow all of the instructions given by the inspectors, for your safety and theirs. There will be plenty of time to ask questions and watch them work from a safe distance.

How can the watercraft inspectors help you?
Inspectors have reach tools, wrenches and pliers, and can assist with removing a stubborn drain plug or hard-to-reach plants.
CANOEING AND KAYAKING IN
THE TWIN CITIES

The Minneapolis/St. Paul metro area has abundant lakes and rivers, all of which you can canoe or kayak! Aside from numerous lakes, there are also six rivers in the metro area that are designated as state water trails:

- Mississippi River State Water Trail
- Rum River State Water Trail
- St. Croix River State Water Trail
- Cannon River State Water Trail
- Minnesota River State Water Trail
- Crow River (North and South Forks) State Water Trail

Free maps and river level reports are available for all of Minnesota’s Water Trails at: mndnr.gov/watertrails.
Canoeing and kayaking tips

- A life jacket is required for every person in your watercraft.
- Canoes and kayaks over 10 feet in length must be licensed.
- In case of emergency, tell family or friends where you plan to paddle and when you intend to return home.
- Useful items to bring include drinking water, food, hat, sunglasses, sunscreen, a map in a sealed waterproof bag, and a compass or GPS unit.
- In areas of high motorboat traffic and/or wind, paddle near the shore.
- To avoid capsizing in areas of rough water, kneel in the bottom of your canoe for stability and head into the waves at a slight angle.
- Water riffles on a river may mean that rocks lie dangerously close to the surface. Be cautious and try to stay on the smoothest water surface.
- If you do fall out of your boat, stay on the upstream side of the boat (to avoid getting pinched between the boat and an obstruction) and swim it back to shore. Most canoes and kayaks will float, even when capsized. If you can’t get back to your boat, float downstream feet first and face up while directing yourself toward shore. Keep your toes out of the water to avoid getting your feet stuck in an underwater obstruction.

continued
• Camping on water trails is typically free at designated campsites, and is first-come, first-served (non-reservable). Some private, county and regional campsites may require reservations and involve fees. See individual water trail maps for more information.
• Leave No Trace. Never litter and always pack out your trash.
• You can find a list of canoe and kayak outfitters at [mndnr.gov/watertrails/outfitters](http://mndnr.gov/watertrails/outfitters). Some outfitters will even help you with transportation logistics (“shuttling”).
FISHING IN THE NEIGHBORHOOD

The Fishing in the Neighborhood (FiN) program provides fishing opportunities for anglers of all ages and experience levels.

What can FiN do for you?

• Enhances fishing opportunities by stocking fish.
• Provides a tackle loaner program.
• Restores shoreline to improve aquatic habitat.
• Improves access.
• Promotes environmental awareness and stewardship.

To learn more about the FiN program and fishing locations managed by FiN around the metro area, check out the FiN Youth and Family Fishing Guide for the Twin Cities Metro Area or visit mndnr.gov/fishing/fin

GET THE LEAD OUT!

Fish right—fish lead free! Search your equipment for lead sinkers and jigs, and replace them with lead-free tackle. Lead is a toxic metal that poisons birds and other wildlife. When lead sinkers are lost through broken fishing lines or other means, birds can inadvertently eat, swallow, and poison them.

Tips to help anglers safeguard wildlife and themselves:

• Use fishing weights made from non-hazardous materials such as steel, tin, tungsten and bismuth.
• Dispose of old lead sinkers and jigs at your local hazardous waste collection site.
• Wash your hands after handling lead fishing tackle or cleaning your tackle box.
• Ask your favorite retailer to stock lead-free fishing tackle.

For more information on lead-free tackle, visit the Minnesota Pollution Control Agency website at www.pca.state.mn.us.
PUBLIC ACCESS
BOAT-LAUNCHING PROTOCOL

Courtesy at the boat ramp
The boat ramp and parking area are first-come, first served.

• If there is both boat traffic in the water and vehicle traffic at the boat access, the line to launch and load is formed by vehicles with trailers, not by boats in the water.
• Prepare your boat while away from the ramp.
• Non-boaters using the public access for angling, swimming (when allowed), dog training, or other water recreation activities should yield to the boaters using the ramp. You should:
  › Reel in lines.
  › Remove all equipment and stay clear of the dock and boat ramp area.
  › Maintain control of pets and children.

Pre-launch preparations
Prepare your boat while in the parking lot. This allows you to take your time, be calm, and mentally go over everything you need to do before putting your boat in the water. Before launching, remember to:

• Install your drain plug.
• Load all equipment onto the boat, including fishing gear, coolers, and life jackets.
• Remove the tie-downs that secure the boat to the trailer (do not remove the winch line from the bow eye).
• Place fenders.
• Ready dock lines.
• Turn on battery switch.
• Pump the fuel primer bulb (if you have one).
• Put the key in the ignition and check the battery.

Once you are 100 percent prepared to launch, move your vehicle in line to use the ramp.
Launching

Your time on the boat ramp should last no more than a few minutes. If you are not familiar with how to tow and back a boat, practice before going to a ramp.

If launching with only one person or with people that are not licensed to drive a motor vehicle:

- Attach the docking line to the trailer or vehicle; this will keep the boat from floating away.
- When it’s your turn, proceed to the first open launch ramp and back down it.
- Unwind the winch line to ease your boat into the water. Once in the water, unhook the winch line from the bow hook.
- Move the boat to a dock or shoreline that is away from the launch lane and secure the boat. Guide the boat using the bow line or tow line or climb aboard to operate.
- Move your vehicle to a parking spot.

After launching, secure your boat, then move your vehicle to a parking space.
Loading

Reminder: The line to launch and load is formed by vehicles with trailers, not by boats in the water.

- When loading with a partner, one person drives the boat up to the dock and drops off the vehicle driver. The boat driver then backs the boat away from the dock and waits for the driver to return with the vehicle. Only tie up to a dock if you are alone or with companions that are not licensed to drive a motor vehicle.
- When the vehicle arrives, the driver backs the trailer into the water and the boat driver gently drives the boat onto the trailer. Do not throttle above idle speed (also known as power loading) to move the boat farther up the trailer; this will cause damage to the ramp.
- When the boat is on the trailer, connect the winch strap to the bow hook and winch the boat the rest of the way up the trailer.
- The vehicle driver can also back in a little farther into the water if needed to make cranking the boat up easier.
- When the boat is all the way up and onto the trailer, the vehicle driver can pull the boat out of the water and drive away from the ramp to the tie-down area.
- Move from the ramp area to the tie down area or the back of the parking lot to prepare your boat to travel down the road.
  › Remove the key from the ignition.
  › Turn off equipment and battery switch.
  › Remove dock lines and fenders.
  › Plug in and check trailer lights.
  › Attach tie downs that secure boat to the trailer.
  › Load equipment from boat to vehicle.
  › Complete the Invasive Species Checklist (see page 4).
  › Remove your drain plug.

Courtesy and boat ramp etiquette are the responsibility of everyone who uses Minnesota’s waterways. Be prepared, be safe, enjoy, and repeat.
BOAT SAFETY

- **Wear a life jacket.** Minnesota law requires wearable U.S. Coast Guard-approved life jackets for each person on board a watercraft. Children under ten years of age must wear a lifejacket when watercraft is underway.

- **Be prepared.** Carry a compass and lake or river map, and a cellphone or two-way VHF marine radio.

- **Take a boater safety course.** For information on how to complete an online or classroom boating safety course, visit [dnr.state.mn.us/safety/boatwater/education.html](http://dnr.state.mn.us/safety/boatwater/education.html)

- **Make a float plan.** Tell family or friends where you plan to go on your boat and when you intend to return home. Include a description of your boat, names of passengers, and description of your car and where it is parked.

- **Prevent capsizing.** To prevent accidents, reduce speed in rough water, don’t overload a boat, secure loads from shifting, and adjust for changing conditions. If the boat capsizes or passengers fall overboard, stay with the boat and try to reboard. Most capsized watercraft will still float. If you have to remain in the water, do not swim away unless it is to a nearby boat or floating object.

- **Prevent falls overboard.** Remain seated while watercraft is underway and do not ride on gunwales or decks.

- **Cold Water Dangers.** Wearing a life jacket can save your life in cold water. Over 30 percent of boating fatalities in Minnesota occur in cold water when a victim is not wearing a life jacket.

- **Brief passengers.** Everyone should know where all safety equipment is and how to use it. Everyone should also know how to start, stop, and steer the boat.

- **Have a designated operator.** The operator of the watercraft should not be under the influence of alcohol or any illegal chemicals.

Adopt-a-River Program

Taking care of water is everybody’s business!

The Adopt-a-River program encourages Minnesotan's to “adopt” a section of a lake, river, wetland, ditch, ravine, or a public water access. Consider any place that needs attention or one near your home or your favorite boating or fishing spot. Volunteers like you, who love the state’s water resources, have removed many millions of pounds of man-made debris. There is nothing more rewarding than being a part of keeping our lakes and river clean for the next generation.

Learn how the program works by visiting our website at mndnr.gov/adopteriver

Boaters should look for and use the new boat clean and drain areas at boat launches in order to help prevent the spread of aquatic invasive species. The new areas provide a designated space that gives you a safe and convenient place to clean your boat, drain all water and dispose of unwanted bait. The boat clean and drain area should be used whether or not a watercraft inspector is present; the following routine is suggested:

1. Safely load the boat onto the trailer at the ramp and then pull forward to the boat clean and drain area.
2. CLEAN your boat by removing plants, zebra mussels, and other invasive animals from watercraft, trailer, anchor, and all water-related equipment.
3. DISPOSE of plants, zebra mussels and other invasive animals in the bin or on the grass.
4. DRAIN water from boat, ballast tanks, and motor. Drain bilge, livewell and baitwell by removing drain plugs. Keep drain plug out and open all water-draining devices for travel.
5. DUMP bait bucket water (and unwanted minnows and leeches) into disposal bin.
   › Plan ahead to save minnows and leeches by replacing lake water with well, bottled, or purified tap water. Worms can be kept in the container as is.
   › Take unwanted worms and all garbage to trash, which is often offsite or at home
6. Finish tying down the boat and securing equipment for safe travel.

SEWAGE PUMPOUT STATIONS

The Clean Vessel Act (CVA) of 1992 was signed into law to reduce pollution from vessel sewage discharges, thus prohibiting the discharge of sewage into fresh water. Boat sewage can contain bacteria, viruses, nutrients, and chemicals that can harm water quality and public health. To address this problem many marinas and boating facilities in the twin cities metro area have pumpout facilities which provide a convenient way to properly dispose of boat sewage.

Pumpout facility locations are marked on the map with the pumpout symbol; contact information follows. The Federal CVA Grant Program provides up to 75% of the cost of pumpout facilities to qualifying projects at public and private marinas and boating facilities.

Pumpout directory
Unless owned by a city, all marinas listed are private. Please contact the marina for specific information.

LAKE AND RIVER USE RESTRICTIONS

Many lakes and rivers in the Twin Cities area have local surface use restrictions, also called “water surface use zoning.” These restrictions are in place to enhance recreational use by ensuring safety and to preserve the natural resources of the state.

To see the complete list of restrictions by county and waterbody go to mndnr.gov/safety/boatwater and click on Local Surface Use Regulations or contact the site administrator.

MINNESOTA’S DESIGNATED TROUT STREAMS/RIVERS/LAKES

Certain streams, rivers and lakes in Minnesota have been designated as trout fishing waters. A fishing license and trout stamp is required to fish in these designated waters. This stamp is necessary for anglers 16-64 years old who wish to fish in designated trout water or possess trout. Please see the Fishing Regulations for seasons, limits and special regulations.
