Southern Dry-Mesic Pine-Oak Woodland
Dry-mesic (or dry) hardwood or pine-hardwood woodlands on sand deposits, primarily in the bluffs of southeastern Minnesota.

Vegetation Structure & Composition
Description is based on summary of vegetation data from 13 plots (relevés).

- **Ground-layer** cover is variable, ranging from sparse to interrupted (5–75%), with prairie species often present. Important species include flowering spurge (Euphorbia corollata), pussytoes (Antennaria spp.), harebell (Campanula rotundifolia), elliptic shinleaf (Pyrola elliptica), white rattlesnake root (Prenanthes alba), round-lobed hepatica (Anemone americana), downy rattlesnake plantain (Goodyera pubescens), heart-leaved aster (Aster cordifolius), and yarrow (Achillea millefolium). Other common species include northern bedstraw (Galium boreale), Clayton’s sweet cicely (Osmorhiza claytonii), lopseed (Phryma leptostachya), columbine (Aquilegia canadensis), hog peanut (Amphicarpaea bracteata), white snakeroot (Eupatorium rugosum), bracken (Pteridium aquilinum), and Pennsylvania sedge (Carex pensylvanica). The community provides important habitat for several rare sand-loving plants, especially Canada forked chickweed (Paronychia canadensis) and marginal shield fern (Dryopteris marginalis) and also rough-seeded fameflower (Talinum rugospermum), goat’s rue (Tephrosia virginiana), ebony spleenwort (Asplenium platyneuron), and seaside three-awn (Aristida tuberculosa).

- **Climbing plants** and **vines** are common but generally short. Common species include Virginia creeper (Parthenocissus vitacea) and wild grape (Vitis riparia).

- **Shrub-layer** cover is mostly patchy to interrupted (25–75%). White pine, bitternut hickory, white oak, pin cherry, and eastern red cedar are important tree saplings, while ninebark (Physocarpus opulifolius), bush juniper (Juniperus communis), and black raspberry (Rubus occidentalis) are important shrubs. Other common shrub-layer species include American hazelnut (Corylus americana), prickly ash (Zanthoxylum americanum), black cherry, gray dogwood (Cornus racemosa), and common poison ivy (Toxicodendron rydbergii). Pipsissewa (Chimaphila umbellata) and leadplant (Amorpha canescens) are typical half-shrubs.

- **Subcanopy** is sparse to patchy (25–100% cover) and often poorly differentiated from the canopy. White pine, eastern red cedar, black cherry, black oak, and white oak are often present.

- **Canopy** cover is patchy to interrupted (25–75%). Canopy is typically dominated by one or more of the following: white pine, jack pine, black oak, or bitternut hickory. Other common species include bur oak, northern pin oak, white oak, and paper birch. Northern red oak, black cherry, quaking aspen, and basswood are occasional.

Landscape Setting & Soils
- **Sand terraces and other sand deposits**—Uncommon. Present on deep sands that have accumulated on valley floors of tributary streams or rivers of the Mississippi River south of the Twin Cities metropolitan area. Most of the sands originate from stream dissection and disintegration of local sandstone, but a few stream bottoms have sands derived from glacial outwash and from stream dissection of glacial till above the sandstone bedrock. Because of the mantle of silty loess that covers the uplands of the PPL, it is likely that fine sands were deposited in the area by wind as well. The sands
are deposited in a variety of landforms including stream terraces, alluvial fans, ramps created by sand blown from valley floors onto adjacent slopes, and mixed deposits of sand and rocks (colluvium) at bases of sandstone outcrops. Although the bedrock from which sands are derived initially contained some carbonates, soils are poor and acidic. Soils tend to be uniformly sandy, lacking subsoil horizons or textural bands that can help to hold or perch snowmelt and rainfall. Soils are excessively drained. Soil-moisture regime is moderately dry. (Blufflands and Rochester Plateau in PPL; very local in Oak Savanna in MIM)

Natural History
In the past, fires were very common throughout the range of FDs27. An analysis of Public Land Survey (PLS) records indicates that the rotation of catastrophic fires was about 135 years, and the rotation of mild surface fires about 15 years. The rotation of all fires combined is estimated to be 14 years. Windthrow was not reported in the surveyors’ notes for this community. (The PLS data for this community are too limited to propose growth stages. Most (97%) of the bearing trees within the primary range of this community were oak trees. Bur oak was by far the most abundant, black oak was occasional, and northern pin oak and white oak were infrequent. The surveyors described this community mostly as scattered timber or oak openings. Jack pine and white pine are present in some modern stands; however, no pine bearing trees were reported by land surveyors.)

Similar Native Plant Community Classes
• **FDs38 Southern Dry-Mesic Oak-Hickory Woodland**
  The ranges of FDs38 and FDs27 overlap in the Bufflands Subsection of the PPL, and both communities have prairie plants in the understory. FDs38 is much more common, occurring on silty soils on upper portions of south- to west-facing bluffs rather than on sandy soils.

• **FDs37 Southern Dry-Mesic Oak (Maple) Forest**
  FDs37 is similar to FDs27 but has not been documented as far south as the PPL. The ranges of the two classes may overlap in southern parts of the MIM, where minimal plant community surveys have been done.

• **UPs14 Southern Dry Savanna**
  UPs14 can be similar to FDs27, especially occurrences on windblown sand (UPs14a). UPs14 often grades into FDs27 on areas of sand deposits with northerly aspects or without periodic fire, and the two classes share a number of prairie and woodland plants. UPs14 has a sparse to patchy canopy (5–25% cover), little woody vegetation in the understory, and more prairie species (especially grasses) and fewer woodland herbs in the ground layer. FDs27 has a patchy to interrupted canopy (25–75% cover), at least some woody understory vegetation present, and a ground layer dominated by woodland grasses and forbs with prairie species generally restricted to small canopy openings.
Native Plant Community Types in Class

- **FDs27a Jack Pine - Oak Woodland (Sand)**
  Dry to dry-mesic pine-hardwood woodlands. The presence of jack pine in the canopy and understory differentiate FDs27a from the other types in this class. Important half-shrub and ground-layer plants include pipsissewa, lowbush blueberry (*Vaccinium angustifolium*), pussytoes, bluets (*Hedyotis longifolia*), round-headed bush-clover (*Lespedeza capitata*), hairy puccoon (*Lithospermum carolinense*), and starry false Solomon’s seal (*Smilacina stellata*). FDs27a is rare and has been documented at only three sites in the Blufflands Subsection of the PPL. Description is based on summary of vegetation data from 2 plots.

- **FDs27b White Pine - Oak Woodland (Sand)**
  Dry-mesic pine-hardwood woodlands. The presence of white pine and northern red oak in the canopy and understory helps to distinguish FDs27b from the other types in this class. Important herbaceous plants include wild sarsaparilla (*Aralia nudicaulis*), zigzag goldenrod (*Solidago flexicaulis*), common enchanter’s nightshade (*Circaea lutetiana*), harebell, bastard toadflax (*Comandra umbellata*), and carrion flowers (*Smilax spp.*). FDs27b is uncommon. Description is based on summary of vegetation data from 6 plots.

- **FDs27c Black Oak - White Oak Woodland (Sand)**
  Dry to dry-mesic hardwood woodlands. The presence of northern pin oak or black oak as canopy dominants helps to distinguish FDs27c from the other types in this class. Pin cherry is also more likely to occur in FDs27c. Important ground-layer plants include woodland sunflower (*Helianthus strumosus*), Indian pipe (*Monotropa uniflora*), wild strawberries (*Fragaria virginiana* and *F. vesca*), and elm-leaved goldenrod (*Solidago ulmifolia*). FDs27c is the most common of the three community types in this class. Description is based on summary of vegetation data from 5 plots.
Forbs, Ferns & Fern Allies

- Clayton's sweet cicely (Osmorhiza claytonii)
- Northern bedstraw (Galium boreale)
- Columbine (Aquilegia canadensis)
- Hog peanut (Amphicarpaea bracteata)
- Lopseed (Phryma leptostachya)
- Bracken (Pteridium aquilinum)
- White snakeroot (Eupatorium rugosum)
- Flowering spurge (Euphorbia corollata)
- Common false Solomon's seal (Smilacina racemosa)
- Pointed-leaved tick trefoil (Desmodium glutinosum)
- White rattlesnakeroot (Prenanthes alba)
- Heart-leaved aster (Aster cordifolius)
- Elliptic shinleaf (Pyrola elliptica)
- Common enchanter's nightshade (Circaea lutetiana)
- Canada mayflower (Maianthemum canadense)
- Wild sarsaparilla (Aralia nudicaulis)
- Elm-leaved goldenrod (Solidago ulmifolia)
- Common strawberry (Fragaria virginiana)
- Harebell (Campanula rotundifolia)
- Gregarious black snakeroot (Sanicula gregaria)
- Pussytoes (Antennaria spp.)
- Downy rattlesnake plantain (Goodyera pubescens)
- Sweet-scented bedstraw (Galium triflorum)
- White avens (Geum canadense)
- Spreading dogbane (Apocynum androsaemifolium)
- Round-lobed hepatica (Anemone americana)
- Wood anemone (Anemone quinquefolia)
- Wild geranium (Geranium maculatum)
- Shining bedstraw (Galium concinnum)
- Yarrow (Achillea millefolium)
- Rattlesnake fern (Botrychium virginianum)
- Lady fern (Athyrium filix-femina)
- Grasses & Sedges
- Pennsylvania sedge (Carex pensylvanica)

Climbing Plants

- Virginia creeper (Parthenocissus spp.)
- Wild grape (Vitis riparia)
- Greenbrier (Smilax tamnoides)

Low Shrubs

- Black raspberry (Rubus occidentalis)
- Red raspberry (Rubus idaeus)
- Pipsissewa (Chimaphila umbellata)
- Leadplant (Amorpha canescens)
- Lowbush blueberry (Vaccinium angustifolium)
- American hazelnut (Corylus americana)
- Missouri gooseberry (Ribes missouriense)
- Prickly ash (Zanthoxylum americanum)
- Poison ivy (Toxicodendron rydbergii)
- Gray dogwood (Cornus racemosa)
- Chokecherry (Prunus virginiana)
- Pagoda dogwood (Cornus alternifolia)
- Pin cherry (Prunus pensylvanica)

Trees

- White pine (Pinus strobus)
- Paper birch (Betula papyrifera)
- Bur oak (Quercus macrocarpa)
- Northern pin oak (Quercus ellipsoidalis)
- White oak (Quercus alba)
- Black oak (Quercus marilandica)
- Black cherry (Prunus serotina)
- Basswood (Picea glauca)
- Ironwood (Carya cordiformis)
- Jack pine (Pinus banksiana)
- Eastern red cedar (Juniperus virginiana)
- Canopy
- Subcanopy
- Shrub Layer

Grasses & Sedges

- Pennsylvania sedge (Carex pensylvanica)

Climbing Plants

- Virginia creeper (Parthenocissus spp.)
- Wild grape (Vitis riparia)
- Greenbrier (Smilax tamnoides)

Low Shrubs

- Black raspberry (Rubus occidentalis)
- Red raspberry (Rubus idaeus)
- Pipsissewa (Chimaphila umbellata)
- Leadplant (Amorpha canescens)
- Lowbush blueberry (Vaccinium angustifolium)
- American hazelnut (Corylus americana)
- Missouri gooseberry (Ribes missouriense)
- Prickly ash (Zanthoxylum americanum)
- Poison ivy (Toxicodendron rydbergii)
- Gray dogwood (Cornus racemosa)
- Chokecherry (Prunus virginiana)
- Pagoda dogwood (Cornus alternifolia)
- Pin cherry (Prunus pensylvanica)

Trees

- White pine (Pinus strobus)
- Paper birch (Betula papyrifera)
- Bur oak (Quercus macrocarpa)
- Northern pin oak (Quercus ellipsoidalis)
- White oak (Quercus alba)
- Black oak (Quercus marilandica)
- Black cherry (Prunus serotina)
- Basswood (Picea glauca)
- Ironwood (Carya cordiformis)
- Jack pine (Pinus banksiana)
- Eastern red cedar (Juniperus virginiana)
- Canopy
- Subcanopy
- Shrub Layer

Grasses & Sedges

- Pennsylvania sedge (Carex pensylvanica)
