Watershed Health Assessment Framework
"Managing for System Health"

MNDNR

CLEAN WATER LAND & LEGACY AMENDMENT

# The Watershed Exploration Process:
mndnr.gov/whaf/explore

❶ Set a point of interest - Start by setting a location, this will allow you visualize watershed boundaries and data specific to that location.

❷ Explore watershed boundaries at multiple spatial scales - Each button provides the ability to visualize and zoom to watershed boundaries at different scales. Also, access land cover summaries from the scale button drop-down menu.

❸ Investigate watershed health scores - Health scores are organized by ecological component in an accordion style menu. Be sure to expand each component to view all of the available scores.

❹ Access additional data layers - Additional map layers can be added from a list of DNR services, or 3rd party services can be added to the map via the service REST endpoint.

❺ Save bookmarks and share URLs - Bookmarks save the current map view to your web browser cache, URLs can be shared to view the map on a different computer or by a different user.

❻ Dive deeper with additional resources - Additional content includes instructions to help use the application, access to the health score data download, and descriptions of input data and analysis methods.
