

# CLEARWATER COUNTY (15)

Number of lakes . . . . . 164  
 Lake area, acres. . . . . 40,829

The lake basins in this county were formed generally by ice blocks buried in glacial drift of the Altamont-Gary moraines which form a divide between the Mississippi River and Red River drainages. Itasca, 15-16, which is the source of the Mississippi River, was formed by ice blocks deposited in a preglacial valley and buried by outwash. The pattern of the basins generally corresponds to the distribution of morainal hills in the area. A series of basins located along the northern boundary of the county were probably formed by ice blocks deposited in a terminal moraine which later collapsed and was covered by lake sediments of Glacial Lake Agassiz.

### Lakes classified by area

	Area in acres										Total
	10 to 25	25 to 50	50 to 75	75 to 100	100 to 125	125 to 150	150 to 200	200 to 500	500 to 1000	1000 to 2500
