

## COOK COUNTY (16)

Number of lakes . . . . .	812
Lake area, acres (excluding Lake Superior) . . . . .	101,152
Lake Superior area adjacent to Cook County, acres . . . . .	962,700

In Cook County most of the lake basins have been formed as a result of glacial erosion rather than glacial deposition as in other areas of the state. The shape and orientation of these basins are controlled by the type of bedrock structure in which they are located. The majority of the lakes in the northern half of the county occupy long narrow bedrock basins, many of which were localized by preglacial valleys that were frequently dammed by glacial drift deposits. In much of the southern half of the county where the land surface is covered with a thicker mantle of glacial deposits, basins formed by ice blocks deposited in glacial till are more common. The following table shows some typical examples of lake basin formation and the relation to bedrock type or surface formation.

### ORIGIN OF COOK COUNTY LAKE BASINS

Ident. no.	Name	General Location	Bedrock type and character of basin
<b>Bedrock basins localized by preglacial valleys</b>			
16-244 16-119	South Crocodile	In band of lakes 3 to 5 miles wide extending along Canadian border from Gunflint, 16-356, to Moose, 16-43.	Rove slates and lava flows. East-west elongated basins located in ridges between intrusive igneous rocks.
16-354 16-41	Winchell Pine	In region south of border lakes, extending across northern half of T. 64 N., Rs. 3 W through 2 E.	Duluth Gabbro. East-west elongated basins located in valleys along bands of differential erosion in gabbro.
<b>Bedrock basins dammed by glacial drift</b>			
16-348	Brule	T. 63 N., Rs. 2, 3 W.	Duluth Gabbro. East-west lakes caused by glacial drift dams at southern and western edges of basins.
16-346	Cascade	T. 62 N., Rs. 2, 3 W.	
<b>Bedrock basins not related to preglacial valleys</b>			
16-633	Saganaga	Along Canadian border at northwest corner of county.	Saganaga Granite. Linear segments of basins located along joint patterns in granite.
16-629	Seagull	South of Saganaga, 16-633	
<b>Ice block basins in glacial till</b>			
16-369	White Pine	Southwest part of county, in T. 61 N., R. 5 W.	Glacial till overlying Duluth Gabbro bedrock.
16-645	Toohey	TS. 60, 61 N., R. 5 W.	

South Fowl, 16-34, is a reservoir created by construction of a privately owned dam across the basin outlet in 1898. A new dam was built in 1934.
