Index by Counties.....	146

### EXPLANATORY PREFACE

#### Sources of Data

The information on the meandered lakes of Minnesota contained herein has been acquired through a number of sources, and has been gathered and compiled by the department staff over a period of many years. It should be kept in mind that these data are not the result of actual surveys or investigations on the ground. Rather, the information has been secured by a careful scrutiny of available published maps and records; through exchange of correspondence and personal interviews; and from miscellaneous information relative to our lakes which the department has acquired incident to the performance of its regular work.

These circumstances should be kept in mind and given due weight by those who have occasion to consult and use the information contained herein. The areas and locations by description of governmental sub-divisions given are believed to be as accurate as such information can be made, without actual field investigations. The extent of each meandered lake has been taken from the original township plats prepared by the United States Land Office. The area of any lake is the sum of all full and fractional governmental sub-divisions located inside of the meander lines or within the lake, actually computed, and is expressed in acres in the tabulation. Exception should be made in the case of a few lakes located on township or range lines where the shore line has been meandered within one township, but not in the other. Where this occurs, no attempt has been made to determine the area of the portion or portions located within the township where the shore lines have not been meandered.

#### Lakes Not Meandered, Are Not Included

Emphasis is placed on the fact that meandered lakes only are dealt with herein. The difficulties encountered in securing anything like authentic data on even the larger and more important meandered bodies of water, was a conclusive indication of the futility of attempting to include those not meandered and on the locations and areas of which very little, if any, published information is to be had. The importance of the latter group, however, as an asset in the proper evaluation of the lake resources of Minnesota, is not thereby minimized. For instance, reliable authorities claim more than a thousand lakes for Otter Tail County. A reference to this county in the "Summary" hereof, discloses only 438 bodies listed. It is therefore to be seen that the non-meandered lakes of our state may well outnumber the meandered ones, or those listed herein.

In the "Summary" showing number of meandered lakes in each county, lakes whose areas affect more than one county are credited to the total number of the lakes of the county in which the largest portion is found. In the general tabulation, however, the names of such lakes appear in each of the counties affected.

Lakes which are located on boundaries of adjoining states and on the United States-Canadian boundary are not listed with the others. Such lakes, their names and general locations, however, are appended separately under the title "Boundary Lakes."

#### Campaign For Names

Considerable effort and a long time has been devoted towards securing names for the lakes listed herein. First, all available published maps and records which were thought to contain useful information were consulted and as many names as possible secured from these sources. Next, lists of all lakes for which names could not be found in publications were prepared for each county, and mailed to individuals who it was believed were interested in and had information on the lakes of their communities, with a request that they insert in these lists as many of the missing names as possible. Even after responses had been received from as many of these correspondents as would make reply, less than 30 per cent of the meandered lakes were found to have any kind of a name. Then, a letter with lists was mailed to secretaries of commercial clubs. Later a mailing list of all of the clerks of town boards was secured and a list of the lakes without names found in each township was sent to the clerk asking her or him to co-operate by forwarding missing names. The aid of forest rangers and game wardens was enlisted in some of the northern counties. Yet in spite of this state-wide campaign, the "Summary" shows over a thousand lakes with no names. Regrettable as this is, the department has gone as far in its efforts to complete this gazetteer, even as to names, as its resources and the purpose of the publication would seem to warrant.

### What's In a Name?

A perusal of the column giving names suggests a worthy field of endeavor for public officials, civic organizations, service clubs and public spirited citizens in general, by way of "dressing up" our fair state. It is quite evident that Minnesota, like Topsy, has "just growed up" without much thought having been given towards emphasizing her natural beauty and attractiveness, and the part that her waters, especially her lakes, was destined to play in her future progress and aesthetic and economic development and history.

More than a hundred names repeat 5 or more times. We have 99 Long, 91 Mud, 76 Rice, 43 Bass, 40 Twin, 39 Round, 36 Clear, 32 Sand, Sandy or Sands, 25 Pine and 25 Cedar. Spring, Turtle, Fish, Duck, Grass, Horseshoe, Island, Silver and Goose repeat a confusing number of times and are scattered all over the state. Swede, Sweden, Scandinavian, Ole, Peterson, Nelson, Mattson, Olson, Johnson, Hanson, Knutson and Larson lead the pace with Irish, O'Brien, O'Leary, Dunnigan, Sullivan, Murphy, Shannon, Kelly, Riley and Ryan vying for honors. Coffee, Sugar, Sandwich, Ham, Egg, Potato, Cranberry, Plum, Lobster and Pie suggest a typical appetizing Minnesota menu. But what identification do these names convey to anyone seeking information and does this array of prosaic epithets adequately describe Minnesota's "eyes, the looking into which the beholder measures the depth of his own nature?" Rum, Whiskey, and Bootleg are outlawed and no longer in the same grace as, perhaps, they were when these lakes received these appendages. Names like Stinking, Devils, Dead Fish, Dead Horse, Dead Man, Pig's Eye and Dirty Nose are doubtless picturesque but hardly attractive. It seems that every known bug, insect, bird, beast and fish may be found in the column of names.

As against this array of repetitions and prosaic appellations, Minnesota has many lakes of attractive and appealing designations which add much to their charm and surroundings. Sylvan, Mirage, Echo, Alpine, Albion, Carnelian, Sunset, Marine and Elkhorn are euphonious and give each a distinctive and charming out-of-door setting. Fernando de Soto, Plantagette, La Salle, Hennepin, Calhoun, Sibley, and Traverse parade before us early pioneers, explorers and makers of history whose names and memories may well be thus perpetuated. Indian names—Winona, Minnetonka, Pokegama, Wabano, Kabetogama, Winnebigoshish—have a peculiar faculty of carrying with them the thrill of the out-of-doors. The Indian lexicon might well be drawn upon more liberally for names to replace the more jarring and unromantic appellations which have been wished on some of our prettiest lakes.

With all of her other boasted resources, without her lakes, our state would be drab, common place, aesthetically uninteresting. With her lakes, fringed with trees and forests, she is charming, coquettish, captivating. People of all classes are coming to a full realization of the value of the state's lake resources and with the wonderful opportunities for recreation and rest to be found here being advertised to all parts of

the world, the citizens of the many communities which annually receive and welcome thousands of guests and visitors at their gates, may well devote some of their energies towards "dressing up" their lakes with attractive names.

The main purpose to be served by this publication is to provide a ready reference to the extent and location of the meandered lakes of the state. If in addition to this much needed information, it will have succeeded in arousing a greater public interest and stimulating a greater pride in this great resource to the end that Minnesota's "sky tinted waters" may be made more attractive and appealing it will have served its purposes.

### Acknowledgments

Much of the credit for finding and supplying the names of the lakes listed in this publication is due to aid and co-operation extended by a number of public spirited officials and citizens. County Officials, Secretaries of Commercial Clubs, Clerks of Town Boards, Game Wardens, State Foresters and the State Forestry Department especially have aided in this campaign. The photos used were furnished through the courtesy of Ten Thousand Lakes of Minnesota Association. The co-operation of all of these individuals and organizations and others is gratefully acknowledged.
