

MAHNOMEN COUNTY (44)

Number of lakes 264
 Lake area, acres. 19,110

Many of the lake basins in the county were formed from ice blocks deposited in till. The map of Mahnomen County showing the distribution of lake basins indicates the majority of the basins are located in a band about 6 to 8 miles wide through Ranges 40 and 41, extending in a north-south direction through the center of the county. This is a hilly morainal region containing numerous ice block lake basins. On either side of this region are scattered basins formed mostly by the uneven distribution of glacial till. Several lake basins along the eastern edge of the county were formed by ice blocks deposited in glacial outwash which partly filled an old preglacial valley. Basins formed in this manner include: Long, 44-44; Double, 44-33, and Greer, 44-36, in the northeast corner of the county, and North Twin, 44-23; South Twin, 44-14; and Snider, 44-45, near the southeast corner of the county.

The largest lakes entirely within the county include the following: South Twin, 44-14, 1,072 acres; North Twin, 44-23, 946 acres; Bass, 44-6, 700 acres; and Snider, 44-45, 660 acres.
