

NORMAN COUNTY (54)

Number of lakes 18
 Lake area, acres. 415

The lake basins in the northeastern part of the county, north of Sundahl, were formed by ice blocks deposited in a weak morainal region which later was inundated by Glacial Lake Agassiz.

The basins in the southeastern part of the county were formed by the irregular deposition of glacial till. Love, 54-17, and an unnamed basin, 54-18, located along the Red River of the North, south of Hendrum, are in the valley of a small tributary of the Red River of the North. The origin of these basins is not clear, although they appear to be covered by sediment deposited as a partial dam across a recent stream valley. There are no large lakes in the county.

Lakes classified by area

		Area in acres			
		10 to 25	25 to 50	50 to 75	Total
Number listed		14	2	2	18
Number affected by drainage or dry		2	0	0	2
