

WASHINGTON COUNTY (82)

Number of lakes¹ 168
 Lake area, acres. 20,605

Nearly all of the lake basins in the county were formed from ice blocks deposited in glacial till. Big Marine, 82-52, and Forest, 82-159, are typical examples. White Bear, 82-167, Long, 82-118, and DeMontreville, 82-101, are ice block basins which were deposited in preglacial valleys. Elmo, 82-106 and Downs, 82-110, were formed by ice blocks deposited in outwash. St. Croix, 82-1, which is also part of U. S. Lock and Dam No. 3 Pool, was originally formed by the damming of Glacial River St. Croix by the Mississippi River which created a delta across the head of the basin.

Several flood plain lakes are located along the Mississippi River in the southern part of the county, these lakes are named on the map but not listed in the tabulation since they are considered part of U. S. Lock and Dam Pools.

Large lakes entirely within Washington County include Forest, 82-159, which has an area of 2,206 acres, and Big Marine, 82-52, which has an area of 1,577 acres. St. Croix, 82-1, has an area of 3,990 acres in Washington County and 4,180 acres in Wisconsin. White Bear, 82-167, comprises 1,255 acres in Washington County and 1,155 acres in Ramsey County.
