

WILKIN COUNTY (84)

Number of lakes 25
 Lake area, acres. 675

Basins in Wilkin County formed by the irregular deposition of glacial till are located in the gently rolling glacial hills of the northeastern part near Rothsay. The other small lakes scattered through the county were formed in shallow depressions adjacent to the numerous beach ridges of Glacial Lake Agassiz which covered all of the county except the northeastern corner. An unnamed basin, 84-25, in Township 135 North, Range 48 West, along the Red River Valley, is an oxbow basin formed by a meander cutoff of the Red River. There are no large lakes in the county.

Breckenridge Reservoir, 84-23, was formed by a dam constructed across the Otter Tail River near Breckenridge by the Works Progress Administration in 1935. The dam is now owned by the City of Breckenridge and utilized for recreation and water supply purposes.

Lakes classified by area

	Area in acres					
	10 to 25	25 to 50	50 to 75	75 to 100	150 to 200	Total
