## Wildlife Manager Report

Deer Permit Area (DPA) 645 is within the Paleozoic Plateau, a region of bluffs and valleys that makes up the state's best deer habitat. Diverse woodlands and prairie, and agriculture that includes crops, grazing and orchards make up this area. DPA 645 went through the public deer population goal setting process in 2014 and deer populations are currently well above the established population objective. DPA 645 will be designated as Unlimited Antlerless for the 2020 season and will also be open during the October Early Antlerless season. This DPA is designated as a CWD Management Zone where mandatory carcass movement restrictions are in place for all deer, including fawns. DNR-provided dumpsters will be available for hunters to dispose of carcass waste properly. CWD testing is voluntary during the entire archery, firearms and muzzleloader seasons by providing the head of harvested deer at designated self-service sampling stations. There is no restriction on the number of disease management permits purchased (\$2.50 each), which may be used to harvest antlerless deer. Hunters in this area may tag up to three legal bucks, one per license season; 1 archery, 1 firearms, 1 muzzleloader. Antler point restrictions (APR) are removed and cross-tagging of bucks is allowed.
