

Minnesota “NO-RISE” Certification

For development in Zone A1-30 and/or AE floodways on the community’s FIRM

Regulation

44 CFR 60.3(d)(3). This federal standard, as adopted by local floodplain management ordinances, prohibits all encroachments, including fill, new construction, substantial improvements, and other development within the adopted regulatory floodway unless it has been demonstrated through hydrologic and hydraulic analysis performed in accordance with standard engineering practice that the proposed encroachment would not result in any increase in flood levels within the community during the occurrence of the 1% annual chance flood.

Certification

I am a duly qualified professional engineer licensed to practice in the State of Minnesota and hereby certify that the attached hydraulic analysis, report, and/or technical memorandum support the determination that the proposed project **will not**:

- Increase the 1% annual chance (100-year) flood elevation by more than 0.00 feet at published cross sections in the Flood Insurance Study (FIS);
- Decrease the 1% annual chance (100-year) flood elevation by more than 0.1 feet at published cross sections in the FIS; or
- Change the horizontal extent of the floodplain or floodway boundary by more than 25 feet.
- I also understand that any deviation from the above floodplain elevation and boundary standards must comply with the following provisions:
 - 1) A rise greater than 0.00 feet requires a Conditional Letter of Map Revision (CLOMR) to be obtained prior to construction, and a Letter of Map Revision (LOMR) must be applied for within six months of project completion;
 - 2) A decrease greater than 0.1 feet does not require a CLOMR but does require a LOMR application to be submitted within six months of project completion; and
 - 3) A floodplain or floodway boundary change greater than 25 feet does not require a CLOMR but does require a LOMR application to be submitted within six months of project completion.
